NEWS BRIEF

Viewdata launch

IBM has launched a viewdata service designed to make its bureau network accessible to small and medium-sized organisations. Telephone concentrators in the major UK business centres make the bureau widely accessible by local call and the company believes that by offering support for viewdata terminals it will find a large market among companies with salesmen or engineers in the field, dealer networks or distribution sites.

Challenge to 4321

MINI manufacturer Wang is chipping away at IBM's market with the release of an entry level version of its 32-bit VS "supermini", the VS 100. It is to be known as the VS 90, and is said to give twice the performance of IBM's 4321, at 85% of the price.

Sperry slump

PROFITS were down 40% at Sperry Corp. Sperry Univac's parent, for the period ended December 31, 1981. Net profit was \$47.3 million, 1 cent for the same quarter of 1980 were \$79.4 million. A company spokesman said the recession, combined with a weak dollar, had badly hit the company's trading results, particularly in relation to overseas subsidiaries.

Banking blueprint

FRANCE's State-owned Credit Lyonnais Bank has asked Sigos, a computer services firm in which it has an 80% stake, to produce a blueprint for a national network which will enable small firms to consult their cash balances on their own individual screens.

NAS shows interest in troubled Magnuson

by Boris Sedaca
RENEWED interest in Magnuson, a leading IBM plug-compatible processor manufacturer, is likely to be shown by another P.C.M. National Advanced Systems, following the collapse of merger talks with Storage Technology.

CLEMENTS... "No good to see a competitor fall by the wayside."

Magnuson's problems have been compounded by losses of over \$10 million on a turnover of under \$5 million for the last quarter of 1981, followed by the resignation of Joseph Hill as president and his replacement by Charles "Chuck" Cole, an academic from the University of Southern California's School of Business faculty, as acting president. Cole has been on the Magnuson board since May 1981.

NAS is keeping its cards close to its chest as far as any possible Magnuson takeover is concerned. "It does the P.C.M. industry no good when we see a competitor fall by the wayside," said John Clements, managing director of NAS.

"We are always interested in looking at our competitors' customer bases but it is a delicate situation. However, it does not figure in our plans at the moment. We already have a sizeable worldwide customer base in that machine range - in the one million instruction per second class."

Chief's departure may split Zilog

by Claire Gooding
US components and systems manufacturer Zilog may be split by its parent Exxon into separate halves, following the sudden departure of several of its top managers, including president Manuel Fernandez.

Zilog has been ploughing money into research and development rather than profit-making, particularly on the systems side, which now accounts for half its business. However, Fernandez denied that he had resigned because Exxon has turned down his 1982 business plan. In a memo released to Zilog employees last Friday, he said he was leaving for an opportunity "too good to let pass" in building his own computer company.

Fernandez will be joined in the new venture by two other top Zilog executives, Wayne Sennett, vice-president of Strategic Planning, and John Banning, a manager in the components division.

It was Sennett who suggested that Exxon may be dividing the components and systems division of Zilog into separate companies.

Indications are that the new company, called Cosmos, will not be competing directly with Zilog and may even use its products. There is a speculation that Federico Paggi, Zilog's test president who left 14 months ago, may be behind the new enterprise.

Meanwhile Zilog is in the hands of three other top executives, including vice-president Pepe Piedra, Zilog's international division manager based in the UK.

No successor for Fernandez has yet been announced.

46 staff shed at Nexos

by Boris Sedaca
TROUBLED office automation company Nexos has made 46 employees redundant following the recent agreement to sell off the marketing rights of its word processor to ICL.

HOOTON... Nexos sales and marketing director.

A spokesman for the State-owned British Technology Group which controls Nexos said that the redundancies were an "inevitable consequence of negotiations".

Last Friday, 46 Nexos employees received a letter from the company personnel manager which terminated their employment forthwith.

The redundancies have hit Nexos employees throughout the country, including Nexos offices in Manchester, Birmingham, Thame, Bristol and London. They are mainly in marketing and sales positions, although some design and accounting jobs may have been affected, according to a BTG spokesman.

Many of the 130 remaining employees are service engineers, as BTG says most are likely to need their jobs.

Nexos sales and marketing director Peter Hooton has resigned by mutual agreement with the company. Hooton had joined Nexos after 20 years at IBM where he was responsible for marketing and business planning.

Dollar boost for ICL

From front page

pressed cautious optimism on the progress being made towards profitability at ICL's annual meeting earlier this week.

The American order comes on top of the 50% increase in sales achieved there in 1981, and the European and UK deals will be particularly welcomed as sales dropped by £29 million in these areas combined last year.

In a new move, the company is expected to announce a new model in the ME29 range, a ME29 model 55. It will have a main store capacity, better working capability and will feature IBM-compatible software allowing the machine to be used in a Network Architecture (SNA) works.

The complete package will be the market in October. The price of the ageing System 10 is understood to have been reduced by 30% recently as a bid to cushion the rise in the cost of its life.

Users win big cut in IBM software fees

by Maggie McLenag
NAGGING from users has finally made IBM change the way it charges for licensed software products and program maintenance. As a result big savings could be in store for large mainframe installations with multiple sites, a welcome relief to the generally upward trend of software prices.

A new scheme extends IBM's Distributed Systems Licence Option (DSLO) from software on the 4100 and systems 3, 34, and 38 to VM, VSE, and MVS licensed program products. The effect is to limit IBM's contact to one central location for each of its customers, and allow the user to co-ordinate the maintenance of his own software.

This means he pays IBM a reduced licence and maintenance fee for any program updates. "We worked on IBM rather like a dipping tap," said George Goodwin, information systems manager of Wavind Plastics and spokesman for the IBM Users Group. "When IBM charged an all-inclusive price for software, prices went up frequently because of the maintenance costs. This is a

sensible strategy; someone like ICI with lots of subsidiaries may not want maintenance on every site, and under this system they will get a reduction of fees."

IBM's maintenance costs are cut because of the reduction in the number of systems programmers needed for customer support. The new scheme puts responsibility for copying and distribution of programs on to the user. Service updates and documentation will also be supplied to only one installation.

"A lot of customers felt that if they had multiple copies of programs they were being excessively penalised," confirmed Maris Romanis, systems support manager of National Advanced Systems, supplier of IBM program-compatible systems and software.

Under the extended DSLO scheme, IBM offers customers a 25% reduction in the licence fee for second and subsequent copies of a licensed program, and will deliver one copy only of the program, service updates and licensed documentation to a single location.

A further change to the pricing structure for maintenance of software will benefit customers running the same software component on more than one processor. If the customer is prepared to accept IBM customer engineering support to a single machine location, a maximum of 160% of the base local program support agreement fee will be charged to cover any number of machines running the same software.

GUNNINGHAM... "We could eat commerce."

Councils urged to sell micro software

by Claire Gooding
LOCAL councils are being urged by computer advisers to sell their home-produced microcomputer software to other users.

The Local Authorities Management Services and Computer Committee (LAMSC) is recommending that a publishing house for microcomputer software packages written by local councils be set up to sell them to other councils and even to users outside.

Lamsc's proposal comes in a report which completes the last phase of a long enquiry into the impact of microcomputers on local government. The main concern is to make the most of existing facilities, so that the £22,000 million local government will be spending this year will be used effectively.

Over 200 mainframes and more than 2,000 microcomputers are in use in local government, says Lamsc. The committee is funded half by local authorities and half by central government, and provides paid consultancy to councils which call on it and also funds research.

"A co-ordinated approach to the use of information technology through the use of microcomputing will produce an increase in the efficiency of local government," says the report.

Lamsc recognises that microcomputers have boosted the demand for applications and goes on to recommend that co-ordination of buying power, facilities and existing resources should take place as soon as possible, across mainframe and microcomputer fields.

As well as many routine local authority applications already implemented in a variety of ways on different mainframes, Lamsc cites another 2,500 potential new applications which are made possible by the advent of microcomputers.

"It makes sound common sense to co-operate," said Roy Barnes, Lamsc director. "There are over 3,300 different applications on all sorts of mainframes and other places as soon as possible, across mainframe and microcomputer fields."

Rate support 'time' cost

govt £240,000
THE estimated cost of computer time (usage and storage) incurred by the Department of the Environment in preparing the 1982/83 rate support grant settlement was estimated to be £241,744 up to the end of December.

More than £1,000 represented expenditure on the department's own computer facilities. Tom King, Secretary of State for the Environment, told MPs in a written Commons answer.

Viewdata boost

IBM has made another move into viewdata by announcing last week that its UK bureau services will be accessible from viewdata terminals. The bureau's processing costs have long been acceptable for a wide range of business applications, according to the company, and now cheap terminals which can be used for several separate services will remove the last barrier to a vast market among retailers and other small businesses. (See page 3.)

Logabax deal

LOGABAX UK has signed an agreement to market Systime's Series 500 microcomputer. The deal will make Logabax one of the major distributors of the Intel 8086 system released by Systime last year.

Computastars

THIS year's sports competition for computer users and the computer industry is under way, with the announcement of the 1982 Computastars. Four regional heats, a national final and a European final are included in a programme sponsored as usual by Computer Weekly. Entry details, page 16.

Rapid Recall is a unique service which provides a complete range of DEC terminals and related equipment. We have a large stock of terminals in stock and can deliver them quickly and reliably. We also offer a full range of repair and maintenance services. For more information, contact us today.

Portable debugging

From front page
wit, marketing manager for Micro Focus, "and we always are."

The facilities provided by Animator are invaluable in testing and debugging, which Micro Focus estimates to be responsible for 67% of programming effort at present. Assembler and Basic programmers have always had the perks that come with an interactive language. They are able to make changes and run the program immediately, with control breaks to examine values along the route.

With a high-level language like Cobol, however, there are tedious steps to be followed in the creation of test data, test running and verification, often themselves involving a great deal of programming time.

Micro Focus is providing a high-level "harness" for such jobs. Program creation and maintenance tools are not themselves new, but the difference in these is that they are portable.

The breakthrough that Micro Focus has made is that all their tools are portable. To write a high level systems tool in Cobol rather than assembly code preserves the portability which made CFS Cobol popular in the first place.

Both Animator and Slideshow have been written with ease of use, as top priority, and are likely to reach beyond the micro market into large mainframe installations.

SERVOGOR 281 FLAT BED PLOTTER

If you are thinking of using an HP or Tektronix flat bed plotter, then you must look at the Servogor 281! Exclusively available in the UK from Comma Computers, the Servogor 281 is a low cost, high performance, multi-pen, microprocessor controlled plotter offering hosts of features, functions and options. The Servogor 281, from Comma Computers, just £3,025.

Call for a demonstration or free colour brochure.

DP managers further ahead in pay stakes

by David Craver
SENIOR data processing managers are winning the biggest percentage of salary increases among computer staff, according to the latest pay survey.

"DP department heads are suddenly getting a lot more than the people they are managing, and this has happened in the last year," says Lawrence Lock, managing director of Management Personnel, the company responsible for the survey.

The rate of increases for senior management categories, which comprise management services, data processing, systems and programming managers, as well as project leaders, has not only been above the rate of inflation, but has widened the differentials over their staff, Lock says.

The survey covers 50 industrial and commercial companies in the South-eastern Home counties, but none in central London.

Median salary of management services managers jumped 33% to £14,000 annually over a 15-month period ending in November 1981. DP managers' pay climbed 28% to £12,750, systems and programming managers' pay was 29% up to £12,000. Project leaders had a 28% rise to £11,000 over the same period.

With the exception of systems programmers, whose salaries soared 58% to £11,025 in the period, all the other "indians" had

much smaller percentage increases than the chiefs," Lock says.

He also thinks the figures for systems programmers may be distorted, although he agrees they are in high demand.

Other salaries at November 1981, with the 15-month percentage increase in brackets are: Senior systems analyst £10,000 (18%); systems analyst £7,800 (10%); analyst/programmer £5,800 (19%); chief programmer £12,134 (21%); senior programmer £9,000 (18%); programmer £7,000 (8%); and trainee programmer £5,000 (14%).

The report also says that 85% of management services managers get a car against 90% 15 months ago, and 36% of DP manager against 41% in the previous survey.

On the operations side the same trend of widening differentials is demonstrated. Operations manager/controllers received a 47% hike in pay to £11,025, while operators had increases ranging from only 5% for senior operators (£6,000) to 25% for shift leaders (£6,600) in the 15-month period. Shift premium is not included.

Data preparation supervisor salaries were up 27% to £6,500, data control supervisors had rises of 32% to £6,420, and data prep and data control ops' pay climbed 48% to £5,328.

Finnish firm wins high sales in Europe

by Kevin Cahill
FINLAND'S leading computer company Nokia Electronics, a division of the Nokia group, has reported a 59% increase in turnover for the year 1981. Turnover of £96.8 million, compared with £60.7 million in 1980, backs the company's recent push into the UK.

Although a large percentage of the growth can be attributed to the inclusion in the figures of the

former state-owned Telenokia telecommunications company, the underlying growth in the company has been about 30%, according to vice-president of Nokia Electronics Kurt Wikstedt.

Exports rose by 110% to £27.1 million from £12.7 million. Much of Nokia's exports, perhaps as high as 42%, go to the USSR.

Sales at the Nokia data subsidiary division, which includes the CII-Honeywell Bull agency and a number of service bureaux, rose by £12.9 million to £43.7 million.

Although no profit figures are quoted for the data division, Mikko computer's sales rose from £11 million to £14.1 million.

This division is spearheading Nokia's drive into Europe and the company has invested £1.5 million in new production facilities for the Mikko.

Later this year Nokia expects to open offices in Switzerland and Holland to complement the drive on European markets which the company launched last year, UK customers include the BBC and British Telecom.

Wikstedt said that he expects Nokia's data division to deliver its first teletext services in Finland later this year, followed by deliveries of the service in other Scandinavian countries towards the end of the year.

High tech home soon

by Philip Hunter
A SHOW house containing the domestic technology of the future is being built in Milton Keynes as part of the Information Technology Year Initiative.

The house, which will be a standard four-bedroom executive dwelling, will incorporate features of high technology expected to be available in the home by 1987.

It is being developed by the Greenwood Construction company, which is providing the company with technology, furnishings and being provided by London-based consultant Butler, Cox and Partners which has done research

into home information systems. "We are still trying to sort out the kind of systems to install," says David Butler, one of the partners of Butler Cox.

The technological development is being considered under seven headings. These are: entertainment, information systems, communications such as voice and data, household management such as heating and lighting, security, education and the office at home.

"Under this last heading, we are studying word processing and banking," says Butler.

FIVE Department of Industry ministers sit in a row giving to grips with the BBC microcomputer. From the right: Kenneth Baker, Minister for Information Technology; Patrick Jenkin, Secretary of State; John Wakeham, Parliamentary Under-Secretary; Norman Lamont, Minister of State; and John MacGregor, Parliamentary Under-Secretary.

Viewdata campaign aims at business market this year

by Donald Kennett
INTER-COMPANY communication has been singled out as a key growth area for viewdata this year, while mass-market penetration will be tackled in a longer-term campaign aiming to achieve significant results by the end of 1984.

These decisions were made at a meeting last week sponsored by

the Department of Industry to boost viewdata (Prestel) and teletext (Ceefax and Oracle). It was a repeat of last year's campaign, which was claimed to have got teletext off the ground, trebling the sales of teletext receivers.

The Association of Viewdata Information Providers was irritated that its representatives were

invited to attend, but not to speak at last year's conference. "But we would not argue with the decision to concentrate on teletext," said the Association's deputy chairman Pat Montague. "Teletext has been an immediate benefit to the manufacturers and it is better that one part of the whole should be making a profit," he added.

This year, the initial decisions have included the plan to continue concentrating on the business sector and to begin a longer term strategy leading to a mass market operation by the end of 1984.

Teletext will continue to be promoted this year and October will once again be declared National Teletext Month. Plans for this year include an expansion of experiments in which the BBC and IBA deliver teletext to schools via their teletext broadcasts.

Other goals for viewdata this year include promoting the rapid growth of new business applications, working out how to package a viewdata service to make it attractive to consumers.

Viewdata and teletext chip maker Mullard, which is part of Philips, is using viewdata in-house and expects to give all its sales engineers a terminal at home this year for technical information.

Managing director Ivor Cohen claims Mullard has 95% of the world market for viewdata and teletext chips. "There is hardly a set in the world in production that doesn't contain chips made in the UK," he said.

British Telecom Information services chief Richard Hooper said there were now 16 suppliers of private viewdata systems in the UK and that of the 200 viewdata services installed worldwide 150 were from the British private sector.

COHEN Mullard's latest viewdata module is only two-thirds the cost of last year's.

CII-HB reports huge loss

by Kevin Cahill
LIKE several other European computer companies reporting annual results this week, French manufacturer CII-Honeywell B has pushed up turnover, but at the expense of profit, which collapsed from last year's £16 million to a loss of just under £40 million.

Turnover at CII-HB, in which US-based Honeywell is currently negotiating with the French government for a reduction in its 49% stake, rose 6.6% to £663 million.

The company lays the blame for the sudden and dramatic fall in profit on sharp increases in financing costs.

The company borrowed heavily to finance the growth in size. With European interest rates at the high teens all year, it is estimated that a combination of increased inventories, debtors and an aggressive investment policy led to the company saddled with very high debts.

The company blamed the need to borrow on "serious under-capitalisation." In the context of the negotiations between Honeywell and the French government at compensation terms, this is seen as a direct criticism of Honeywell, which it is implied did not have enough in the company, thereby forcing it to borrow excessively.

The other shareholder in CII-HB, giant industrial conglomerate St Gobain, is already in the final stages of nationalisation, so the criticism becomes less relevant.

The grand total debt on CII-HB's books is now estimated at £415 million, which makes its financial worse than ICL's at the end of ICL's problems last year.

Honeywell itself recently said that it aimed to reduce its stake in CII-HB to 10% or less.

This would enable Honeywell to avoid showing the CII-HB losses against its already sufficiently profits.

Given the under-capitalised state of CII-HB, the French government may achieve the reduction of Honeywell's stake by investing more money in CII-HB.

This would dilute Honeywell's share, and possibly avoid having to make any cash payments. Spokenmen at Honeywell would not comment on the CII-HB figures.

Elsewhere in Europe commentators feel that the final outcome of the negotiations may see the marketing agreement under which CII-HB was the Honeywell agent in France, Germany and Scandinavia break up, and Honeywell would more undertake its own marketing.

Last year CII-HB employed an additional 1,800 people to bring its total workforce to 21,000.

IBM boosts bureau business in the UK and reopens its US service in the teeth of AT&T

Viewdata used as bait to attract small firms

by Donald Kennett
VIEWDATA is to be the vehicle which will bring IBM's bureau services to the mass of small businesses in the UK.

Launching the viewdata facility last week, marketing programmes Barry Aust said that although costs had been falling by about 25% a year, two factors had prevented data processing services from being more widely used: they were perceived as being so complex as to require specialist skills, and they required prohibitively expensive terminals.

Viewdata terminals are very cheap in data processing terms and the spread of teletext sets is educating the public in the use of computer-type systems, he said. Making the applications on IBM's system appear simple had provided a real challenge for the development team.

IBM's service is a Prestel look-alike, using the same screen layout and keying conventions wherever possible, but it is fully interactive, enabling files to be updated as data

is entered. It provides several levels of access control, allowing different users to view different types of information from the same set of files and only allowing some of them to alter it.

It is part of the TBS Terminal Business System running on an IBM 370/168 at the company's Warwick computer centre. TBS is designed to provide normal accounting and business services interactively at pre-set times.

The centre is accessed via a packet switched network with seven nodes from Glasgow to Bristol which also provides access to IBM's other computer centres.

The network is based on System 7 minis, three of which have been upgraded to handle viewdata terminals. The rest of the network is to be expanded to 12 nodes and upgraded to handle viewdata by the end of the year.

Commercial service is due to start on April 1 and until then the company will run trial applications with selected customers. Five such trials started last

month. They include a credit company which is having car dealers call in to check potential purchasers' outstanding balances on their present cars and work out the monthly payments for different deposits and payback periods.

Another pilot user is a supermarket chain whose branches enter goods received and taking daily and the stock position weekly. Another is a financial company which has more than 3,000 overseas contacts.

IBM plans no involvement with the supply of terminals, except to inform customers of the range of features available. Pilot customers are using terminals from a variety of suppliers, but all have chosen colour sets and full alphanumeric keyboards.

Simple systems can be got running in three weeks and cost from £2,000 to implement, while complex systems could take four months and cost £50,000. Running costs could range from £15,000 to £50,000 a year for a system with 15 to 30 terminals using it.

by Howard Karten
A RETURN TO remote computing services with an emphasis on cost to coast networking facilities has been announced by IBM in the US.

The move is likely to bring the computer giant into immediate confrontation with American Telephone and Telegraph, which has given the go-ahead to its Advanced Communications Service, the packet switched network it first talked about some years ago.

IBM has run a bureau service in the UK since early in the Seventies, but in the US it was forced to sell its business in 1973 to Control Data in settlement of an antitrust suit.

By re-entering the field, which the court decreed prevented it from doing until 1979, IBM is pitting itself against US industry leaders Control Data, General, McDonnell-Douglas Automation, Tymshare, and National CSS.

The US remote computing service market was some \$4 billion last year, and is expected to grow at 15% to 20% annually, according to industry estimates.

There will be no immediate effect on IBM's UK bureau service, although it does raise the possibility that the UK service could be linked to the US network.

Called the IBM Information Network, the US service is not a bureau, but a data processing and network facility for customers to perform their own tasks at remote terminals.

The information network gives access to IBM program products and productivity tools, a service akin to the VM Service Productivity Service which is available from the UK IBM bureau.

AT&T's ACS is expected to start later this year. While ACS will probably move towards adding more processing power, IBM is likely to add more communications processors in its network.

Washington-based ADAPSO - the Association of Data Processing Service Organisations - said it might oppose IBM's plan if it appeared that IBM was unfairly subsidising the new service.

IBM's network for the new service consists of several 3000 series processors.

Still longer wait for BBC micro

by Robert Parry
THE sorry tale of the Acorn/BBC microcomputer continues with more confusion over when the 12,000 outstanding orders will be fulfilled.

The first television programme in the series that the British-built machine is designed to complement was shown a month ago, and Acorn managing director Chris Curry expected then that all the orders would be met in March. He is sticking to this, but the company handling the orders, BL Marketing of Kettering, is telling people not to expect delivery before April.

The BBC puts this down to caution, as BL Marketing's part, adding that everyone was working to the same delivery dates, but interpreting them slightly differently. This extends to expected delivery dates for machines ordered once full production is achieved.

Curry says the lead time will then be about three weeks. BBC Enterprises is less precise, preferring to wait and see what happens when full production rates actually arrive.

More intelligent Intelligent Network Processors from Codex.

The Codex 6000 Series.

As usual, Codex are well ahead of the rest of the field. This time with a family of INPs which offer a distinctive turnkey combination of cost/performance characteristics and flexibility for communications in a multinode data network. Configurations of up to 16 nodes can be supported, with multiple high-speed links maintained between nodes. All with complete user transparency.

True statistical multiplexing, both synchronous and asynchronous, data compression and efficient link protocol combine to provide high throughput efficiency, with error-free transmission using GO-BACK-N ARQ technique. The Codex 6000 series offers a variety of options - for example, centralised network control with monitoring and statistics gathering. Any mix of terminals can be accommodated, including synchronous, asynchronous and SDLC. You can obtain complete details merely by writing "INP 6000" on your letterhead or business card, and posting it to Codex (UK) Limited. Or, of course, by telephoning.

Codex provides a complete range of integrated communication products, including Statistical Multiplexers, High, Medium and Low Speed Modems, Intelligent Terminals, Network Control and Management Systems, Data Security Systems, Voice Digitizers, Technical Control facilities, as well as a broad range of network enhancement products.

Codex (UK) Limited, 105/107 Lansdowne Road, Croydon CR0 2BN. Telephone: 01-680 8507.

Shopping by micro on cards

by Donald Kennett
A SERVICE which would enable microcomputer users to log on and order brand-name consumer goods from the cheapest source, irrespective of which country they are sold in, is Walter Forbes' target for his US-based company Comp-U-Card.

Forbes admits that this is some way down the line, but he is lining up companies to operate the service in the UK, Germany and France and has already licensed Japan's tenth largest retailer, UNY Company.

In the US, the service has been available for the last three months to the 50,000 microcomputer users that access the Dow Jones, Compuserve and Readers Digest's Source Information services and Forbes is working on deals with cable television companies experimenting with two-way cable based services.

Comp-U-Card's service is based on a database of comparative price information which it has made available to subscribers since 1973 through telephone sales staff. Initially computers were only used in the service to compile the books that sales staff used, but three years ago the staff were equipped with terminals online to the database.

This enables them to supply information on 30,000 products to over two million subscribers.

Variations on the service include Comp-U-Claim, which is designed to make information on the cheapest sources of replacement goods available to insurance claims.

Burroughs sells first advanced office systems

by David Craver
AS A clearer view of Burroughs' strategy in office automation begins to emerge, a firm of unnamed London solicitors is set to be the first company to the UK to install a complete version of Burroughs' content addressable Office Information System (OFIS).

With chairman Michael Blumenthal going on record as saying half of Burroughs' revenues will come from office automation by the end of the decade, there seems to be some "method in the madness" of Burroughs' takeover of ailing Memorex.

The heart of OFIS is a content addressable electronic filing cabinet. The future of that device, which is compatible with the computer systems of Burroughs' major competitors, could be enhanced greatly both by Memorex's expertise in disc technology and its distribution channels with access to IBM and plug compatible installations.

The firm of London solicitors whose name has not been revealed while final details of contract are completed, is ordering between £3 and £4 million worth of equipment to include some 100 secretarial word processors, 50 enquiry terminals, and 50 managerial workstations.

OFIS product manager Ian Murdoch predicts that 30 to 40 complete systems will be installed in the UK this year, but many

additional orders are expected for elements of the system. These include word processors, an optical character recognition page reader, professionals' terminals, workstations, communications processors, and the OFISfile or electronic filing cabinet.

That users do not have to buy the whole package, but can buy components of the system, is crucial to Burroughs' attempt to re-establish its once premier position in the office automation market. Pilkington Glass in Lancashire is the first UK company to install the standalone OFISfile, which will be linked to Wordplex terminals. The Swiss Banking System will also install OFIS and ICL, whose Canadian subsidiary was one of the pilot sites, is looking closely at the product.

Murdoch claims that OFISfile gives a "totally new dimension to filing," putting access to computer databases in the hands of end users rather than data processing managers.

Burroughs says there has been extraordinary interest in the product, and the UK police at the Police National Computer Authorities Centre is another possible customer. Authorities have said that OFISfile 1, which can store 160 Mbytes or 80,000 A4 pages of data, could handle all but a small percentage of police investigations.

Some secrecy has surrounded

MURDOCH... Burroughs' "new dimension to filing."

OFISfile, and what separates it from the more expensive and generally mainframe-based content addressable devices from ICL, IBM, and Datapoint. While the actual algorithms used in the software remain proprietary, it is a combination of inverted filing and extreme data compression techniques which cut down the usual overheads needed in data storage.

Cost of 160 Mbyte file cabinet is some £40,000, and it can be hooked to any of Burroughs' range of communications controllers costing from £9,000.

Other OFIS products will integrate voice and video transmissions, and digital facsimile will be linked directly into the system by the beginning of 1983.

SALES BRIEF DEC wins Barclays comms deal

DEC has pulled off a contract which will complete latest phase of automatic branch controllers in a planned communications project which will lead to the installation of systems in all its 2,200 branches.

The controllers will handle communications within the branch and provide links to the bank's private telecommunications network.

£8.3 million order

GEC Telecommunications won £8.3 million worth of work for digital and analogue modems, multi-line modems, and transmission equipment from Telecom. The equipment has 140-megabit-per-second capacity and will be used in a single circuit.

Exploring

SEISMIC exploration and processing company Helix Physical of Woking has won a contract to explore for oil and gas in the North Sea. The company is using a fleet of exploration vessels and seismic processing equipment to explore for oil and gas in the North Sea.

Third upgrade

WOODS Management Services Ltd. has gone to the third stage of its third upgrade. The company is upgrading its computer system to handle a larger volume of business. The company is using a fleet of exploration vessels and seismic processing equipment to explore for oil and gas in the North Sea.

More from NCR

LONDON-based bureau of Computer Services has installed NCR N-8455, which has over applications running on two NCR Century 70s. The company is using a fleet of exploration vessels and seismic processing equipment to explore for oil and gas in the North Sea.

Soroc dropped

SANDY-based Trivector has dropped the US-made range of VDU's and signal range of OEM agreement with Newbury Laboratories for the DRE 8840 matrix printer. The company is using a fleet of exploration vessels and seismic processing equipment to explore for oil and gas in the North Sea.

Energy system

THE UK Atomic Energy Authority has ordered a Prime Series 11 to perform simulation of natural oil reservoirs. The system will be used to simulate the flow of oil and gas from the reservoirs. The company is using a fleet of exploration vessels and seismic processing equipment to explore for oil and gas in the North Sea.

Initial order

TOWEL rental company has ordered a Prime Series 11 to perform simulation of natural oil reservoirs. The system will be used to simulate the flow of oil and gas from the reservoirs. The company is using a fleet of exploration vessels and seismic processing equipment to explore for oil and gas in the North Sea.

Signs of revival in UK micro chip market

by Robert Parry
SIGNS are appearing that the depressed UK microelectronic components market is starting to pick up, particularly at the high technology end.

Despite a slump in sales and profits for Unitech, one of Britain's major distributors of microelectronic products through its subsidiaries Rapid Recall and Celdis, chairman Peter Curry feels the worst may now be over in the UK.

This is echoed by others in the distribution business, who see confidence returning to the market. Unitech's profit for the half-year to November 28 fell to £1.47 million before tax, a drop of 38% on the corresponding period of the previous year. Sales are 11% down. The group manufactures electronic components and equipment as well as marketing semiconductor components and systems in Europe and the UK, but it is felt that the distribution side of the business suffered most,

particularly in the German and other European subsidiaries.

John Weatherhead, managing director of Rapid Recall, says that in the computer products side of the business, there is now a substantial pick-up.

Growth has slowed, but bookings went well over the past few months and billings were growing slowly, he said.

Ray West, Celdis' managing director, is cautious of predicting market improvements, although Celdis' business has moved ahead "by leaps and bounds." He feels that the market is less pessimistic, but that the company's good performance is due more to increased market penetration than to an increasing market.

Customers are starting to pull forward schedules and distributors are having to place orders further ahead to ensure a place in the supply pipeline. "People are making a long-term commitment rather than living from day to day," West says.

WEST... "Ahead by leaps and bounds."

Another sign of the market picking up is the lengthening of lead times. West estimates that for high technology products they have increased by two to three weeks over the last month, and if things do improve he foresees a "massive" rate of change.

The mix of products selling well, is also changing. West sees a move to bigger memories in particular.

Bill Carter, a product manager at Thame Components, also sees this trend, adding that 16-bit microprocessors are now beginning to move well.

Thame's level of business is starting to increase slowly after a very flat year or so. Interest from customers is increasing more rapidly. "It's very busy out there, and we have a lot of activity on the phones," says Carter. "We will be back in action again in the second half of the year."

Rapid Recall bid to 'change thinking' on terminal buying

by David Craver
ONE of the major distributors of components in the UK is breaking into more traditional DP markets with the formation of a terminal division.

And by playing on the techniques it has learned in the components business, Rapid Recall hopes to change people's thinking about the buying of terminals.

Rapid Recall likes to regard itself as the Marks and Spencer of the industrial components distributors, according to managing director John Weatherhead. He intends to sell terminals with the same level of support and service that is demanded in the components industry.

Until now, he asserts, most terminals have been sold by entrepreneurs with a "get the cash and run" attitude. Rapid Recall already supplies Digital Equipment terminals in large quantities and in the next two years Weatherhead expects turnover from the new division, called Rapid Terminals, to be over £2 million annually.

Total sales of High Wycombe-based Rapid Recall are running at over £10 million for the year ending in May 1982, most of that com-

ing from microprocessor products. Last year's turnover was some £8 million, so growth has not been at the 50% rate Weatherhead says he has been used to since the company was formed seven years ago.

"The recession really knocked us back," Weatherhead claims, but he looks for better results in 1982, with sales of about £16 million.

Terminal sales now are about 200 units a month.

Later this month DEC will name a number of authorised distributors for its terminal

systems, and Rapid Recall is expected to be among them. It fits into DEC's corporate strategy of appointing authorised distributors across its product range. "The distributor is coming of age in the high technology area," says DEC's Edgar Valentine, UK marketing manager of microprocessors and terminals. Rapid Recall was named last April as the sole UK distributor of DEC microcomputer products.

The other authorised terminal distributors which DEC is expected to name include Zygal, Bytech, MBS Rentals, and Abacus. Some eight commercial OEMs have been appointed by DEC over the past year.

The role of the distributor in the sale of computer systems will focus the user's attention on the selling of the features of equipment rather than the "bits and bytes", Valentine suggests.

Rapid Recall plans to sign up three terminal distribution arrangements with other major manufacturers over the next six to nine months. And continuing the move into mainstream data processing, Weatherhead says plans are afoot to get involved in software and systems products.

WEATHERHEAD... Marks and Spencer of the industrial components distributors.

French govt cash aid for Intertechnique

by Jack Gee
FRENCH peripheral company Intertechnique has received a large injection of cash from the French government, indicating a significant role for it in the country's emerging plans for a centrally coordinated computer industry.

Jacques Maillet, president of Intertechnique, said in Paris he was confident that privately-owned French computer firms still had a bright future in spite of the nationalisation of his company's leading competitors.

Maillet reported that the blessing of all Intertechnique partners, including himself (with a 13% stake) Marcel Dassault Aircraft Corp (31%) and the Rivaud banking group (18%).

Maillet emphasised that American business methods must be applied. "This is imperative when facing trans-Atlantic competition," he added. "Confronted by the nationalisation programme we shall not sacrifice profits to growth. Without good management you are bound to be penalised by market laws sooner or later."

Maillet added that 250 million francs (£25 million) will be devoted to research. The government

will pump in 85 million francs (£8.5 million) of which 61 million francs will be subsidies and 24 million francs a 15-year loan.

In return Intertechnique undertakes to increase its turnover by an annual average of 40% and increase exports by between 35 and 40% as well as creating new jobs. It will increase its capital by 30 million francs and reinvest each year out of its 1981, 1982 and 1983 profits.

Maillet said this plan had the blessing of all Intertechnique partners, including himself (with a 13% stake) Marcel Dassault Aircraft Corp (31%) and the Rivaud banking group (18%).

Maillet added that 250 million francs (£25 million) will be devoted to research. The government

DP industry slowdown

by Jack Gee
FRANCE's computer and electronics industry showed slower growth last year - 17% compared with an annual average of 25.6% over the three previous years, industry leader George Boudeville said in Paris last week.

Boudeville, president of the SPER Federation, said turnover increased by 19.1 billion francs (£1.9 billion) in 1981 compared with 16.3 billion francs in 1980. But he added: "This pause is only relative. Orders for 1981 total 35 billion francs, so 1982 will show a level of expansion."

Military orders accounted for

64% in 1981, equalling the previous year, including both French and foreign government customers. Foreign orders continue to represent half of turnover produced by the 53,500 workers in the industry.

The workforce has been increasing at an average of 4.2% annually since 1979 with an increase of 7.8% for engineers and executives, 6.2% for technicians and only 1.1% for workmen.

Boudeville said: "Demand for engineers and executives is so strong that certain jobs will remain vacant."

Japan acts on privacy

by Philip Hunter
JAPAN is expected to introduce a law on computer privacy in the spring.

The Japanese government has acknowledged public fear of the invasion of privacy and is committed to implementing guidelines on privacy protection and international transfer of personal data, drawn up by OECD, Organisation for Economic Co-operation and Development.

About half of the Japanese people questioned in a recent survey answered that they thought their computerised society resulted in excessive quantities of information, and more than half felt that privacy violations were increasing.

Iceland has also established laws on data protection and those of Norway, prohibit the export of private data collected at home.

'26-hour week in the year 2000'

by David Craver
UNION pressure is mounting for the government and other major employers to sign agreements on the introduction of new technology, with the Civil Service unions and the Banking and Financial Union at the forefront of the battle.

But Terry Duffy, president of the Amalgamated Union of Engineering Workers, has again made clear that it is not the technology, but the way it is implemented, that is causing the unions concern.

"Resistance to the introduction of new technology will damage the opportunity to create wealth that is needed to improve society", Duffy writes in Inbuscon's survey on the use of robots in UK industry (see right).

In a call for trade unions to become more multi-national as a means of co-ordinating action, Duffy suggests that the working week could be reduced 10% every five years. That would bring a 26-hour, four-day week by the year 2000.

Reduction in the working week is at the heart of the campaigns by the Civil Service unions and BIFU, who fear the rapid disappearance of jobs as the banks and government increasingly computerise their operations. Cabinet discussions have been going on for some weeks over an agreement with the Civil Service, and the banking unions are stepping up their pressure as the annual pay claim falls due.

The union approach, says Duffy should be to beef up research departments to assess the effect of technological change, so that the facts can be presented in a professional way over the bargaining table. On top of that there should be a concerted effort to build new training facilities.

"Robots are here to stay. We must ensure that they are used to the benefit of mankind in general," he states.

Robots have generally replaced unpleasant or dangerous jobs - where union agreement has not been difficult.

Unions back new technology

by Boris Sedgwick
THERE has been no strong union opposition to the introduction of robots into UK plants, according to a report published last week by management consultants Inbuscon.

"In general, the industrial unions have endorsed the use of new technology as a necessary means of sustaining industrial output and competing effectively with overseas producers," says the report.

"A key feature of the union response has been the negotiation of new technology agreements. White collar workers have felt the greatest impact, particularly in the insurance and banking sectors, and unions such as ASTMS, APEX and TASS have been prominent in negotiating such agreements."

The report adds that as the introduction of technological

change has become a feature of collective bargaining, different unions have adopted different policies.

"ASTMS has been keen to secure early consultation and to participate in the early decisions on technology, whereas APEX has looked more to regulating the technical implementation and safety provisions of new equipment."

In negotiating the introduction of new technology, says the report, redundancy consultation and participation, no downgrading of jobs, regulating operating practices and safeguards, ensuring health and safety, and provision of retraining.

The report quotes an example from an ILETC working party in November 1981: "The service of the National Industrial Committee for Engineering is to face up to the

challenge of new electronic technology with confidence - get the additional training and take control of all the work available."

The report points out that many of the jobs so far replaced have been of an unpleasant or hazardous nature, such as welding, paint spraying, die casting and injection moulding.

"In these cases, agreement with unions has not been difficult to obtain, provided other suitable jobs were available. In other cases, where the tasks are not necessarily hazardous, highly repetitive work is generally involved with little or no element of judgement or control. Robots are not yet capable of human sensory perception of undertaking only relatively unskilled jobs."

Industrial robots in: Japan, USA, and UK. Inbuscon Management Consultants, 672 6761, Epsom, Surrey, Tel: 0437 6761.

Software deals signed

THIS UK microcomputer arm of Systematics International Group is widening the market for its software products by signing agreements with Rank Xerox and Philips Business Systems. Until now it has concentrated on the Apple, because of its extensive dealer network, selling financial and administration packages at £250 each under the UK policy of low-price high-volume sales.

Now its software packages will be available on the Xerox 820 microcomputer and the Philips P2000 range, to be marketed shortly by Philips itself.

2,000 packages are scheduled for distribution in the first quarter of this year. In addition, Currys chain of Micro-C stores is to sell SIM products for the Apple, and Bean Business Centre, part of the Unilever Group, will stock the software packages in its 10 business centres.

Widening the Ring

by Donald Kennett
CAMBRIDGE Ring builder Toltec Computer has added interfaces for \$100-bus micros and Data General minis to the range available for its local area network. Currently available interfaces include versions for Digital Equipment and Computer Automation machines and an IEEE 488 bus version.

Toltec is now working on versions for Intel's Multibus and Motorola's Versabus, as well as software drivers to link the attached processors to the Ring's BSP byte-stream protocol.

Software for the \$100-bus systems will run under CPM, while software for DEC machines is already available to run under the RT-11, RSX-11 and VMS operating systems.

EVOLUTION OR OBSOLESCENCE?

The concept that the dodo wasn't able to grasp was planning for tomorrow, today.

With computer technology advancing so rapidly can you be sure your storage systems of today are not heading for extinction?

At Storage Technology we are committed to manufacturing products that move with the times. Which is why we have become world leaders in supply and maintenance of a full range of plug compatible peripherals.

We design and build our own high speed, high density storage systems, so that we provide what you need, when you need it.

Today we are planning unique new data systems, printers, communications processors, and our own CPU's.

And we provide a service back-up that other companies will strive to match in the future.

If you are looking for ways to ensure that your system stands the test of time, take a close look at Storage Technology.

For more facts and information on tomorrow's products, today, call Roy Dodds, UK Sales Manager on Esher (0372) 67041.

STORAGE TECHNOLOGY
World leaders in main-frame computer peripherals.

Comal ready for further inroads into UK market

COMAL 80, the structured Basic teaching language widely used in Scandinavia, has strengthened its foothold in the UK market with the news that Commodore and Gemini Microcomputers are to provide extended versions.

A limited capability implementation of the language is already in use in schools throughout the UK, used on the Commodore Pet and on a Danish microcomputer called the Piccolo. The Irish Department of Education, however, has adopted a full version of Comal as the vehicle for its scheme to subsidise microcomputers in secondary education, and it has been supplied direct from Metanac, the Danish developer, for the Apple.

A year ago, Commodore announced that a ROM board was under development to extend Comal capabilities on the Pet, as the RAM version currently in use leaves only 5K of usable memory for processing, but since then nothing has been released.

"We are now in the process of purchasing the rights to sell an 8096 soft-loadable version for the Pet," said Rod Wellbum, technical services manager at Commodore.

"The problem now is that there is no documentation, but it will be available to users in about seven weeks."

The other company, Amersham-based systems house Gemini Microcomputers, was set up only a year ago to develop peripheral board products for Nascom computers, which led to the production of its own CPU and the launch of the Gemini Multiboard system on which Comal 80 is now implemented. It has signed an OEM agreement with Metanac.

"Our version will run on either a Nascom II or on the Multiboard at the moment, but we plan to offer it to users of other Z80-based microcomputers later," said John Marshall, managing director of Gemini.

Developed by Borge Christensen and Benedict Loeft in Denmark, Comal is a form of Basic which incorporates the type of structures used in Pascal, and is favoured by educationalists because of its informative error messages. It is in use in 90 per cent of Danish schools, and has spread to Holland, Belgium, Germany and the US.

"Some of the trouble in getting it accepted in the UK is because articles have been written about it by computer specialists," said Mogens Pelle, of Metanac. "It was, in fact, intended to replace Basic, and it should be teachers that are talking about it."

Pelle added that a Comal compiler would also be available from Metanac for systems running under CP/M before the end of the year.

Gemini's version runs under RP/M, a specially developed CP/M look-alike operating system for the Multiboard computer. It was designed for cassette operation for first-time users who do not want to use discs immediately, but want to develop CP/M compatible software.

The space shortage problem encountered on the Pet does not apply to the Multiboard because the version of Comal available from Gemini is overlaid, and 32K of memory is left after loading. Apple counteracts the problem by using the Softcard to give Z80 facilities to a 6502 machine.

"There has been disquiet with

MARSHALL of Gemini... "Comal offers so many refinements."

Microsoft Basic for some time," commented Marshall, of Gemini. "Comal offers so many refinements and advantages in operation."

IBM query language goes public

by Claire Gooding
THE relational query language SQL/DS from IBM is about to make its public debut next month a year after its announcement under the whole concept of relational databases respectively.

March will be a critical time as the SQL/DS will be rolled out to everyday use - particularly in terms of machine performance. SQL/DS is a structured query language, known within IBM as the friendlier name of Sequel, was announced as part of IBM's progression towards giving more power to the end user.

It avoids jargon, using English-like syntax and "joining" the series of tables which select selective queries to be made, most like a sophisticated text editor.

"We have not reached the point where just anyone can sit down and get out what they want; you need some training. But we come, but it's not Sequel," said software marketing manager Joe Garnett.

At present IBM has SQL/DS in 20 guinea-pigs sites world-wide.

COMPANY NEWS

HITT... Resigned as president and chairman.

A rescue plan for Magnuson

FOLLOWING Magnuson's \$10 million loss in its fourth quarter, and the failure of Storage Technology's recent takeover bid, the company is stitching together a new plan to raise cash.

The plan, expected to be presented to investors next week, is being prepared in the absence of Joseph L. Hitt, company chairman and president who resigned in the wake of the revelation that the company had made \$10 million in losses on revenue of \$5 million in the fourth quarter of 1981.

Following Hitt's resignation, Charles R. Cole has taken over as president and Paul N. Magnuson has returned as chairman.

The company has laid off 140 people, mostly executive staff. Company spokesman Bob Stephens said his business plan would be used to raise an undisclosed amount of cash from investors. The company had already received offers of cash, and immediate funds was not the issue. The problem was to get the company's product strategy right.

Magnuson, which employed about 550 people before the redundancies last week had sales for 1981 of \$30 million, \$2.5 million better than in 1980.

Telecoms seen as success story of the Eighties

WITH the financial community in the City now taking a more serious interest in the computer and telecommunications industry, studies of this sector are proving popular.

The latest report* is from stockbrokers Capel Cure Myers and its author, analyst John E. Clarke, foresees many profitable opportunities for the telecommunications industry in the years ahead.

He says that during the 1980s deregulation and technical change will result in a revolution in inter and intra office communications as well as main exchange and transmission equipment.

Clarke mentions forecasts of 9% a year growth for the total telecommunications market, with data transmission equipment deliveries growing at 15% per annum in real terms.

Clarke reckons that 2% of world gross product is now telecommunications equipment with some developed countries having more than 2% of gross domestic product devoted to telecommunications.

He acknowledges that there is no such thing as a telecommunications industry totally free from regulation, but this does not weaken the case for substantial deregulation which he sees as introducing a strong measure of market oriented thinking into what in the UK has previously been an industry dominated by engineers and civil servants from Whitehall.

Even without deregulation, however, the scale of telecommunications growth in the UK over

the next few years can be gauged from British Telecom's investment plans.

In 1977/78 BT invested £845 million in new exchanges and other equipment. By 1980/81 this figure had nearly doubled to £1,550 million and for 1982/83 the target for investment in new equipment is £2,500 million.

The report makes clear that those massive expenditures will remain firmly under British Telecom's control and GEC, STC and Plessey will remain the key suppliers into what Clarke describes as one of the world's largest domestic telecommunications industries.

The Third World has 70% of the world's population, but only 7% of total world telephones

One of the prime cases for deregulation is the stimulus it is expected to give to exporters.

In the past 20 years the UK's share of the worldwide telecommunications market has fallen considerably but Clarke still sees enormous opportunities for exports.

He says that countries with established indigenous industries tend to be nationalistic with regard to the purchase of main exchanges and transmission equipment, and

Satellite communications... a key growth area.

opportunities for exporting TXE or System X exchanges to the US or Europe just do not exist.

The battleground for European, Japanese and US exporters will be the less developed countries. The Third World has 70% of the world's population, but only 7% of total world telephones.

The prizes are considerable as a country seldom changes the basic framework of the initial system once installed, and there are opportunities for lucrative consultancy, supply and maintenance, and management contracts.

Two key product areas identified as offering special opportunities are the provision of satellite communications systems and undersea cable links.

British Aerospace has recently formed a company called Satcom with French military hardware supplier Matra, which will bid for regional satellite communications contracts.

Looking at transmission equipment, Clarke points out that the UK domestic market for transmission equipment is currently worth about £150 million a year, but can be expected to grow rapidly once installations of digital networks accelerates during the mid-Eighties.

Clarke says the domestic market for modems and multiplexers is likely to experience further rapid growth over the next five years. It has been forecast that the market for data terminals will be five times its present size by 1987.

Clarke says that in all but the very long-term, fears about modems becoming obsolete are misplaced.

Looking at the market for attachments to the basic network, Clarke foresees that the second handset and peripheral equipment market will inevitably be the fastest growing.

He reckons that the three main beneficiaries in terms of basic

equipment supply will be GEC, Plessey and TMC (Philips-Pye).

The most far-reaching phase of deregulation is expected to be enacted in July 1983 when BT loses the monopoly right to supply, install and maintain fully digital PABX systems with stored program controls. He sees this product (the digital PABX), as the key to the so-called office revolution.

There have been widespread complaints about getting BT to install PABX systems all of which are obtained from seven approved suppliers. It is felt that with BT no longer in monopoly control of the market, delays in installation and the cost of maintenance will be reduced, the market generally will expand, and BT will be forced to be more competitive.

*Telecommunications in the Eighties and Beyond by John E. Clarke and available from Capel Cure Myers, Bath House, Holborn Viaduct, London EC1A 2EU. Price on application.

Farmer's friend monitors milk yield

A SYSTEM aimed at the specialist market of dairy farming is being offered on the Altos microcomputer by Robox, the Glasgow-based systems house, through Logitek, of Chorley, Lancs.

The system is built around a central file of records detailing each cow's lactation history, productivity and feeding details. Historical information is held on a database which is updated regularly to pinpoint any trends or changes that might lead to trouble. This should enable the farmer to monitor the herd and avert potential health or feeding problems.

Facts and figures on milk yields are also recorded, and instructions on calving intervals, bull fertility and cow conception rate. Farmers can keep weekly herd records with the package, which claims to offer complete dairy management for

herds of up to 3,000 animals.

Management reports can be produced for such essential items as veterinary information, selected studies of particular groups of cattle and their feeding, calving and productivity history. This data can be compared and contrasted to produce a variety of records and analyses.

The package was originally developed by R.J. Systems, a software house based in Ayr, for the Superbrain, and 35 of the systems have been sold through Hunday Electronics of Newcastle since the beginning of 1981.

"The main problem was that computer people know nothing about cows," said Jim Reef, a director of R.J. Systems. "We wrote the package in conjunction with dairy husbandry consultants."

It is now implemented on the Altos ACS 8000-2 microcomputer supplied by Logitek, with 64K memory, which is sufficient for a herd of up to 1,000.

The total cost of hardware and software would be £5,500 for this size of system, but a larger configuration would be needed for herds of up to 3,000.

An additional feature of the package is that it will link with other electronic systems on the farm, such as one for feeding.

"It calculates the exact amount for the animals, and the information is passed direct to automatic feeding equipment," explained Reef.

This is the first system that R.J. Systems has tackled in the farming area, until now it has concentrated on domestic retail supplies systems.

A young scientist takes on the world's most sophisticated data-bank network-and brings the West to the brink of chaos...

"Imaginable, believable and exciting with a plot that is technically up-to-date... It's a true page-turner with the technological world of computers as the weapon."

ICL joint marketing deal

A TURNKEY stockbroking package for the ICL ME29 minicomputer is to be marketed jointly by Jackson Associates, the London and Chichester based software house, and ICL under the recently announced Counterpoint trading agreement.

Under the agreement, ICL will join forces with software houses to develop application systems for its hardware.

The marketing agreement follows an earlier contract awarded to JA to design and develop the investor investment management and stockbroker administration system for ICL. Trials are now in progress, and the full system should be available in May.

Based on ICL's IDMS database, Investmentmaster is a system with a dual role to automate accounting in a stockbroker's office, and to provide up-to-date information on clients for investment and fund managers.

"This is Jackson Associates' first venture into stockbroking," said Robert Hodge, Investmentmaster project manager at JA. "Our main area of interest until now has been in the commodity broking market. Three of the packages have already been sold to London stockbrokers by ICL."

SOFTWARE BRIEF

Scheduling saves costs

COMPUTERISED vehicle scheduling offers savings of between 10%-50% on transport costs, according to a report published by the Institute of Grocery Distribution.

Copies may be obtained from the Publications Department, Institute of Grocery Distribution, Grange Lane, Letchworth Heath, Watford WD25 8DQ, price £10.

Multi-lingual

MULTI-LANGUAGE capabilities for Hewlett-Packard 9845 and 9845 desk-top computers are offered by a French development system (PDS) from newly formed Protek Electronics, specialists in hard and software enhancements for HP systems.

Tandy edition

TANDY Corp has issued a book listing application software available for its TRS-80 Models 1, II, III, Colour and Pocket microcomputers. The UK version contains over 500 programs written by professionals and amateurs. The Tandy TRS-80 Applications Software Sourcebook is available at over 270 Tandy stores and dealers in the UK, price £3.95.

System changes need to be worked into the schedule on time . . . Mike Ellis discusses the role of the operations analyst

Planner ensures that systems are 'operations friendly'

THE operations analyst is a member of the operations department with no day-to-day production responsibilities, concentrating full-time on the operational implications of new systems.

Every ops manager who wishes to set up an analyst function must go against the operational grain. He must employ staff who do not spend their time worrying about tonight's schedule and solving to-day's problems. He must allow his ops analysts to plan only for the future.

Where do ops analysts come from? What qualities must they have? How can they gain acceptance?

The first essential is that the operations manager should really believe in the need for the function when he sets it up, as operations analysts will need a high level of management support to counter the objections which will automatically arise.

These will mainly come from the systems team who will see the ops analyst as a hindrance to systems implementation and an interference in their job.

Systems people will tell you that it is their job to take into account the requirements of all the interested parties in the system (including operations). However, with the greater specialisation of project teams and the increasing division between operations and systems, systems people can become remote from the realities of running computer systems on a production basis.

They will be experts on the system they are developing, but will not necessarily understand how operations runs the existing systems which they must interface with.

The ops analyst, on the other hand, will be an expert in the existing production systems and must work closely with the developers to ensure that the new system can be integrated into the existing production schedules with the minimum of disruption.

There is a tendency to accept shortcomings in systems and find ways around their worst excesses.

So how does the ops manager go about establishing this role within operations? Most important to begin with is the setting of clear-cut objectives.

A typical brief might be: "The ops analyst will have no responsibilities for day-to-day production running. He will concentrate on new and amended systems to ensure that they: - fulfil operations design requirements - are handed over to production in a workable state - do not disrupt the running of existing systems."

The ops analyst must be encouraged to make a positive contribution at every stage of project development. He is not a systems auditor, sitting in judgment on the design of others. He is an integral part of the development process, concerned only with the systems operability and not its business functionality.

In today's jargon, he must ensure that systems are "operations friendly."

When the operations manager comes to recruit ops analysts, he need not usually look far. Most installations have one, or two, operational experts with wide-ranging responsibilities covering

such topics as user liaison, system troubleshooting, job setup, file management, JCL writing, input control, production documentation, operator training, etc.

Many of these functions fall naturally into the domain of the ops analyst and can therefore be performed by him. All other "production" activities should be re-allocated to existing staff.

The ops analyst's first priority is to become involved in those systems about to be implemented. He should set up discussions with systems staff to determine when and how the system is to be implemented, what systems support will be provided and what the continuing

plans are in the event of failure. He must also take a positive role in aiding the implementation, by arranging for additional back-up copies of files to be taken, shift cover to be arranged, production schedules and manuals to be amended, and so on.

For systems being tested, he should review the test plans, suggest any extra tests which might be introduced, review the effect on existing production schedules, etc. And it is his job to arrange additional machine time and media, write production JCL, assist in training/documentation.

For systems in the early stages of development, the ops analyst has time to review any system documentation produced and gradually learn about the system. He must review how the system actually affects operations in terms of

agency plans in the event of failure.

He must also take a positive role in aiding the implementation, by arranging for additional back-up copies of files to be taken, shift cover to be arranged, production schedules and manuals to be amended, and so on.

The analyst should document such events as wasteful use of machine resources, systems prone to failure, excessive parameter input. These should be brought to the notice of systems management and a positive commitment to making improvements sought.

Systems reaction to the analyst is usually mixed. Some systems analysts welcome having a single point of contact who can represent operations and spare the time to talk about the future. (How often have you heard the systems people lament "I can never find anyone to talk to in ops. They arrange meetings, but cancel them whenever a production problem crops up"?)

Others see the analyst as a stumbling block whose role is to object to everything and delay all implementations.

Ultimately, true acceptance of the ops analyst will only come through practical experience of his role in the development process. The proof of the pudding lies in better system implementations - fewer disruptions to existing systems - fewer system failures - better informed operations staff, and the general improvement that come with the proper management of change.

It is not always essential for an ops analyst to come from within operations. Programmers and systems analysts make excellent ops analysts and my experience is that they are always surprised at how much there is to do on the operational side of systems development.

All ops analysts should be given some systems training, since topics like flowcharting, file design, on-line systems design and output report design are critical to his job. Interviewing and influencing skills should also be taught.

Besides the technical training given to ops analysts, emphasis must also be given to understanding the company's business and the way the computer systems

are used.

Systems analysts are such supreme optimists that they seldom believe that their systems contain all the normal pitfalls that every other system contains. Many a system analyst has been heard to say: "But you shouldn't have done that - the system didn't expect it." The operational realist should be: "But why did the system allow me to do that? - It should have stopped me doing it, if it couldn't cope with it."

The ops analyst must inject into the project not so much a note of pessimism as one of realism.

The system test will take longer than the systems analyst thinks - there will be problems when you try to feed an output file from the new system into a system which has been running for 10 years, is badly documented and no-one is really sure how it works - some programs will fail for fundamental reasons (can't take multi-reel input files - always expect there to be data on the input file - think all years have 365 days and 52 weeks).

An ops analyst will see these same problems week after week on various systems and will quickly learn that all projects are bedevilled by similar problems. On the other hand, the systems analyst may only work on one project a year and thus will learn these hard operational lessons at a much slower rate. (Remember even the space shuttle had a delay due to systems interface problems!)

Use broad vision. The ops analyst must look at every new system from a broad operational viewpoint, assessing its impact not only on the machine room, but also on data prep, job assembly, output handling, the network, remote sites.

He must ask what the requirements are for extra equipment, additional operations staff, different machine resources (CPU time, memory, disk, tapes).

His knowledge of the system may be based upon out-of-date or inaccurate program specifications.

He must always remember that he is representing the interests of the whole ops department

to a better designed, tested and implemented system.

Challenge everything. He must learn to challenge everything which could impact on the operations department. Every operational assumption made by the systems analyst in his design document must be challenged.

Some will have been made incorrectly, based upon what the systems analyst thinks happens within operations - or should happen. The systems analyst will be an expert on his own system, but not on operations. He may not even know the production schedule of the system he is amending, its dependencies, backups and restart points.

His knowledge of the system may be based upon out-of-date or inaccurate program specifications.

be concerned with operability. His place is within the ops department reviewing the operational implications of all new systems within a business area.

It is not unknown for two independent project groups to be simultaneously making amendments to the same system without understanding what the other is doing. It is the ops analyst's job to bring these separate requirements together and understand how the overall operation is affected.

In developing the ops analyst role, what talents should the operations manager look for? It is vital that the analyst has been in and around computing for three or four years and has gained real practical experience. He or she must understand what the operator's job entails, how jobs are set-up on the machine, how data prep works, what operations utilities are available, what business functions the operation supports, how outputs are reconciled.

He should also have knowledge of such applications as minicomputers, microfiche, writing JCL, run scheduling, operations standards.

His experience will have taught him that systems never quite work the way systems designers plan them. He will know that if there are ways in which the operators can bring the system down, they will find them eventually. (There is a law which says that any system which is based on human reliability is an unreliable system!)

will the users require for provision of output? What online system availability percentage can be guaranteed?

This places a requirement on the analyst to keep well in touch with the department, to ensure that he really knows what its needs are. This is very important since he is representing each section in his discussions with the development groups.

Operations themselves may be changed how and when they run system for greater operational efficiency or owing to a change in business requirements.

Be single-minded. The ops analyst must always remember that he is representing the interests of the whole ops department. He is therefore be single-minded in knowing what he wants and how to get it.

He will be under a lot of pressure to convince him that he does not really want some of the things which he has requested in his design requirements ("I will delay the project to provide an automatic computer reconciliation of these financial fields. All ops have to do is collect these reports and add this figure to the figure and . . .").

During the later phases of project development, the pressure on the systems team to achieve committed implementation dates often becomes greater than ensuring the system is fully tested. (Ellis adds that "The time scale for any phase of project development can always be extended - except for systems testing - which can only be shortened.")

The analyst must stand firm on those aspects of testing without which the system is not workable in operational terms. He will need strong support from his operations manager to stem the tide of "get the system in at all costs".

He may lose the battle, but must ensure that the business users have been made aware of the potential problems inherent in the implementation.

Many companies thought that it was still too early to state with any degree of certainty what effect the new technology was having on their work. Those that had already been a change thought that productivity had been increased and the quality of the work done was now higher.

Word processors were responsible for taking the boredom out of repetitive typing work, and many executives were experiencing increased efficiency from their secretaries as WP equipment took over much of the time-consuming work.

Few companies said that the installation of new technology had

High turnover 23% Recruitment difficulty 17%

Operators are bored and troubled by office technology, says report

BRITISH companies have their eyes firmly fixed on technology for improving efficiency in the office, despite widespread complaints of eye strain and other ailments among operators of the new machines. Boredom is also a major problem and it is leading to higher than average absenteeism.

These are some of the findings of a national survey carried out by the Alfred Marks Bureau, entitled *The Machine Dream*. But while managers have revealed their complete acceptance of machines in the office, they are often slow to realise that the operators of such devices are as vital as the equipment itself, says the report.

"A machine is often only as good as its operator, and it is imperative that employers take the operator's interests into consideration," says Bernard Marks, chairman of the Alfred Marks Group. "Technology is bringing with it the need for a higher calibre of operator with a clear requirement for almost continuous training."

Eye strain is the most common complaint of VDU operators, and headaches and migraines are suffered most often by data preparation staff.

Some employers have reacted by eliminating glare and installing air conditioning, and some prohibit word processors operators from using a VDU for longer than certain periods without a break.

Alfred Marks sent question-

naires to the executives responsible for machine operators in companies throughout the country, and replies were received from 193 firms employing anything from 25 to more than 5,000 staff. Half of the companies were in the Greater London area, with the remainder spread throughout Britain.

Word processing equipment continues to spread, with 57% of the companies questioned now using them. But old habits die hard, and manual typewriters are still to be found in 62% of companies. Electronic typewriters, with simple WP capabilities, are also on the increase and can be seen in nearly a third of the offices surveyed.

Many companies thought that it was still too early to state with any degree of certainty what effect the new technology was having on their work. Those that had already been a change thought that productivity had been increased and the quality of the work done was now higher.

Word processors were responsible for taking the boredom out of repetitive typing work, and many executives were experiencing increased efficiency from their secretaries as WP equipment took over much of the time-consuming work.

led to redundancies, and one company had even increased staffing levels.

Operators working with the same piece of equipment all day and every day can suffer from boredom and illness that can be directly attributed to the machinery. Boredom usually manifests itself in higher than average absenteeism - 33% of those sampled said that pool typists and data entry staff were the most susceptible job categories.

Word processor operators are absent from work no more than the national average, which is just as well because the word processor was the machine thought most likely to be closed down as a result of operator absence.

Eye strain is now the No 1 illness, demoting the 1977 leader, headaches and migraines, to the No 2 slot. The increase in the number of VDUs in use has been paralleled by the increase in eye strain. From third position in 1974, it moved to second in 1977, and takes top place today with 40%.

Although headaches and migraines are relegated to No 2, they prove a regular problem for over half of the data prep operators. Whether this is due to mechanical noise or constant chatter is not made clear.

Many companies are determined to make their word processor

companies surveyed.

Because of the wide selection of WP equipment on the market, many companies are having trouble in recruiting staff with relevant experience. In central London, 45% of firms are finding this a problem.

A glance at the table showing the problems most concerning the managers of word processing departments will show that the top gripe is directly attributable to poor training of the executive supplying work to the area. A word processor can easily decline into a very expensive typewriter if operators and users are unaware of its full capabilities.

The report concludes: "It is vital that employers take care and pay attention to their dedicated machine operators - they are the guinea pigs for the successful future of the future. Before too

long, executives will find themselves having to operate screen-based computers, otherwise they will lose the marketing edge of competitors who are welcoming and adapting to the office of tomorrow, today."

* *The Machine Dream* - A report on the experience and expectations of companies employing full-time machine operators to improve office productivity. Alfred Marks Bureau Statistical Services Division, Adia House, 44-45, Regent Street, London W1R 5PA. £20.00.

Bringing
computers
to life

THE Computer Fair

Personal computers
Home computing
Small business systems

In all walks of life, personal computers have revolutionised computer power - bringing it within the reach of a far wider and more popular market than ever before.

In 1982 this revolution will explode onto the home and personal computer market. To meet this demand, Practical Computing and Your Computer announce a brand new event - The Computer Fair. The promotion of the exhibition will be heavily geared to attract the growing market of potential and existing users of personal computers, from home computer enthusiasts to businessmen.

Bring your computers and services to life - all walks of life - at The Computer Fair!

Complete and return the coupon - we'll send you details.

Can you spot the Pascal bugs?

PROGRAMMERS with a fluency in Pascal might care to flex their wits on the following exercise, which contains five errors in a nine-line Pascal program. See if you can spot them before reading the answers at the bottom of the page.

```

program test
const
  nil = '0';
begin
  if nil < '0' then
    writeln('WRONG', +nil, .123)
  else
    writeln('RIGHT')
end.

```

If you fail to pick out all five errors, be not disheartened for you will be in the company of five reputable Pascal compilers. They were fed the code and not one found all the errors.

So if you have a Pascal compiler available, it might be worth while giving the program a run.

The exercise was used as ammunition in an article urging users and suppliers to adopt Pascal compilers conforming to a new standard due to be published by BSI, British Standards Institute, this month. The article is written by Brian Wichmann — a senior principal scientific officer at the Information Technology and Computing Centre of the National Physical Laboratory (NPL).

The big drawback of Pascal hitherto, Wichmann argues, has been the lack of a standard. Pascal programs have therefore been machine dependent.

Wichmann goes on to claim that if the imminent standard is adopted, Pascal programs will be

far more portable than programs written in Fortran or Cobol, which both have had standards for well over ten years.

Why is this so? Wichmann has a ready answer. The standard for Fortran and Cobol is no more than a definition and does not require that invalid programs be rejected by a compiler. At the same time the Pascal standard does not have the many options available to Fortran and Cobol.

Some Fortran and Cobol programs are not portable because they use options specific to particular compilers.

Wichmann also claims that Pascal compilers will have to undergo more rigorous testing before being cleared as standard than Fortran or Cobol compilers do at present. A test suite for this purpose has been

developed by the NPL in collaboration with the University of Tasmania.

This suite, which conforms to standards agreed by ISO, International Standards Organisation, includes a collection of incorrect sample programs such as the exercise on this page which the compilers must reject with suitable diagnostics in order to pass.

There are also quality tests to ensure that the compiler can handle programs of sufficient complexity and that real arithmetic is sufficiently accurate.

There is now a good standard available and it is vital that it is used, Wichmann urges. This can be achieved only by independent testing of compilers, and this possibility is being investigated by the BSI.

LAW... His program should lead to savings.

Brian is a 'model' PhD

A NEW application of computer modelling techniques to the design of internal combustion engines has won a PhD for a project engineer in the Midlands.

The finite element analysis method of analysing structures by dividing them into small imaginary regular pieces was combined with fluid mechanics to provide a complete model of the main bearing and crankshaft.

The degree was awarded to Brian Law, of diesel engine makers Perkins Engines of Peterborough, by Nottingham University.

The work took four years, and the write-up of the thesis a year of what Law describes as "very hard work."

Law's program should lead to savings through the exact calculation of crankshaft strengths. At present such calculations can be

inaccurate and crankshafts are therefore usually made much too strong, resulting in unnecessary expense.

At the same time the program should help eliminate the trial and error aspect of crankshaft assembly by providing precise specifications to begin with.

There is even the possibility that this new program will improve the reliability of engines by enabling tolerances to be more accurately determined. "It can investigate what the engine would be like with a bent crankshaft," Law says.

Whether this would eliminate those occasional batches of old cars off the assembly line Law is unable to say. It is well known that some new cars start to develop early faults because crankshafts and bearings were set slightly out of alignment.

Coping with the rubbish

A SYSTEM called Ross has brought publicity to the activities of Lamasc, the Local Authorities Management Services and Computer Committee.

Ross, Refuse Operation System Simulation to its friends, applies methods of so-called expert systems to calculate the optimum deployment of men, machines and dustbins for efficient refuse collection. Local authorities pay for the computing involved, £40 for an initial audit and more for the full service, depending on the size of the operation.

There is no intention to ram efficiency down the throat of local authorities, according to Lamasc's director Roy Barnes. "The system gives management a choice — pay or save," he says.

It all depends on which of 19 different methods of refuse collection the authority adopts.

BARNES... "Pay or save."

The computer system breaks down the 19 methods of collection and other factors such as number of vehicles and bins into 300 elements for analysis on an ICL 1900. There is also a version for the Commodore Pet, the micro most favoured by local government.

PUZZLER

GIVEN a piece of string 360cm long, what are the dimensions of the largest rectangular parcel (as regards volume) that can be tied up in the way illustrated here — once right round the length, and twice right round the width? Ignore whatever extra string might be required to form a knot.

See page 46 for solution. (This diagram is just to show the general shape involved, and is not drawn to scale.)

Pascal code errors

Errors in code of program (see story top of page):

1. Program must contain the word output as a parameter.
2. Nil cannot be used as an identifier because it is a reserved word.
3. # is written as <> (not equals).
4. Nil cannot follow a sign.
5. A decimal point must be preceded by a digit.

So the corrected program is:

```

program test (output);
const
  nil = '0';
begin
  if nil <> '0' then
    writeln('WRONG', nil, 0.123)
  else
    writeln('RIGHT')
end.

```

OUCH!

We remember what it was like being an OEM.

We've come a long way in the past 10 years.

Today we're Britain's largest manufacturer of interactive business computers with an unbeatable range of hardware.

But it wasn't so long ago that we were starting out — as an OEM!

So it isn't surprising that we still remember the pressures of the OEM side of the business and have a lot of empathy with the problems.

We realise the importance of

first class kit — and it's no secret that the Systime range has proven itself to be without equal.

To operate efficiently OEMs need a firm commitment on delivery. Systime can deliver within 30 days. If we give you a delivery date we'll stick to it.

Next we don't believe in forcing our customers into a

corner with contracts that could end up strangling them. We are flexible — so are our contracts.

Systime has an unrivalled reputation for service and support — we guarantee to have someone on site anywhere in the U.K. within 4 hours.

That's the kind of service your customers demand.

And finally you'll find our prices more than competitive. Why not phone or return the coupon and find out for yourself.

We make it our business to help

Looking for low-cost resilience? You don't need a list. A word will do. MOMENTUM!

If you're interested in looking at computers for on-line transaction processing, your list of computer manufacturers can be just about as long or short as you like.

But if you want resilience — the built-in ability of your system to recuperate quickly after a failure — your list will be very short indeed.

And if you want this "availability insurance" without having to take a giant leap to a fully-duplicated system, forget about the list altogether. Just remember a word...

MOMENTUM!

From CTL.

No other computer maker offers you a choice of resilience features, starting with systems costing only

£40K. No other computer maker offers you a standard upgrade path — letting you add resilience in steps as you need it. And no other computer maker offers resilience as a retrofittable add-on to its systems already in the field.

In other words, CTL computers are the only ones with MOMENTUM. Or anything that resembles it. Send us the coupon and we'll give you the word.

Attention: Roger Fulton.

Andrew Thomas kicks off the DP industry's sports season... Here is your chance to put Sebastian Coe in the shade

Calling all DP athletes — Computastars is back!

Sponsored by Computer Weekly

Paul White springs for the London Borough of Lambeth at the 1981 Barnet heat

Women at Gloucester County Council tug to victory in the 1981 Computug (UK finals)

TIME to get your tracksuit out of mothballs and blow the dust off your plimsolls — it's Computastars season again. This year's chance for the men and women from computer users and suppliers across the country to compete for Computer Weekly's national sports awards.

And, after that, go on to battle with contingents from Holland and Belgium for European medals. Computastars is a team and individual competition which calls for athletics skills on track and field, in general sports and in the gymnasium. There are to be four regional heats building up to national finals.

All are sponsored this year, as usual, by Computer Weekly, which will be awarding gold, silver and bronze medals along with individual and team trophies.

Entries are open to men's and women's teams of between three and five, and any number of teams can enter from a single user or supplier company.

Each team puts up members who compete in the eight events which make up the regional heats. One of the team members has to do all the events, and therefore competes against the star from the

other teams in an individual competition. Then, if the team makes it through to the finals, the star goes for an individual national medal.

Events can range from long jump and discus through sprints, hurdles and short sprints to the dreaded steeplechase. For now, however, organisers Gordon and Maureen Cairns are keeping the

exact details to themselves, in the best tradition of Computastars.

Among the strongest teams last year were the men of BL Systems, who won the national team award. Kalamazoo's Jeff Harrison carried off the individual gold.

In the women's events, Legal & General Assurance won the team prize for the second year running, with Number One Bridget Cuthill winning the women's individual gold for the second year.

This year's specials

THIS year sees an extension to the main competition with special categories for small units and veterans, as well as a repeat of the popular 1981 tug-of-war competition.

The small units section is to give those companies or installations which have no more than 25 eligible people working at one location a chance to win their own award while still competing in the main competition to win their own award while still competing in the main competition. The term "one location" here means within a 25-mile radius of the location.

Likewise, the veterans section is for teams which comprise mem-

bers who are all over 35. Both these special sections have the standard £35 entry fee.

These classes are being run this year for men only, though if they attract enough interest among women they will be extended there as well.

Run alongside Computastars is the tug-of-war competition, Computug. An opportunity to prove superstrength, it is open to teams of five, men or women, though not those already competing in Computastars.

The entry cost is £10 per team. The same rules and eligibility regulations as for the main competition apply.

If you have a query on Computastars, please don't contact us at Computer Weekly — get in touch with the organiser at 117b High Street, Croydon, CR0 1QG. Tel: 01-688-6690.

COMPUTASTARS ENTRY FORM

We have read and accept the conditions of entry for the Computastars/Computug 1982 and would like to enter

Main competition Men's teams Women's teams
Small units Men's teams Women's teams
Veterans Men's teams Women's teams
Computug Men's teams Women's teams

Name of team(s)

Company

Address

Name of contact

Telephone

Signature of DP manager or equivalent authority

Position held

We would like to compete in the following region:

NORTH (BARNLEY)
LONDON (ENFIELD)

MIDLANDS (BIRMINGHAM)
SOUTH (CRAWLEY)

please circle appropriate region

Enclosed is £..... to cover the entry fees for the team(s). Cheques should be made payable to Computastars Ltd.

In all matters relating to the rules or conditions of entry, the decision of the organisers is final.

Please send entry form and fees to Computastars, 117b High Street, Croydon CR0 1QG. Telephone 01-688 6690

Last year's UK finals. Dave Cross of National Provident makes a splash during the steeplechase. Behind him is Rowntree Macintosh's Maria Rigg

Competition rules

THE rules for the 1982 Computastars are:

● Teams will consist of not less than three and not more than five people.

● Each team other than a veterans' team is required to nominate a Number One competitor who will compete for the individual title in addition to being a member of the team.

● Teams will compete in the regional preliminary heats.

● The winning teams from each region will be invited to participate in the national final. Additionally, in the men's competition, the highest scoring veteran team and the highest scoring small unit team will be invited to compete in the national final.

● The top three men's and women's teams at the UK finals will be invited to participate in the European finals, scheduled for early September in Belgium.

● In each event in each round, three members of the team will compete — the nominated Number One, and two other team members chosen by the team captain.

● Team captains must be a member of the team and the organisers will only recognise the team captain's selection for events.

● Should the Number One be unable to compete after being nominated, then the team captain will nominate a substitute from the remaining team members. If a substitute for the original Number One is used after the competition has started, then neither the original Number One nor the substitute will be eligible for the individual title.

Eligibility for entry

THOSE eligible to take part in Computastars fall into the following categories:

● Only personnel who are fully coated to data processing activities.

● Only personnel who were employed by their present company prior to February 1, 1982 can represent that company.

● Should a competitor leave the employ of the company he or she represents, that person will no longer be eligible to represent that company after the date of leaving.

● Companies may enter as many teams as they wish, subject to eligibility. A competitor may represent only one team and, having been nominated for that team, may not represent any other team in the competition during the current year.

● Teams wishing to enter the veterans' section (men only) must wholly comprise members who are 35 years old or over on February 1, 1982. Teams in this section are not eligible to nominate a Number One of the individual title, and event selection will be any three members from the team.

● Teams wishing to enter the small units section of the men's

competition must meet the following conditions.

1. The unit or company must employ less than 25 eligible people (men or women and including contract staff), within a 25 mile radius of the location of the team entering.

2. The team will compete in the main competition and must also nominate a Number One who will compete for the individual title.

● Teams not entering the small units competition may consist of members of the company drawn from any location.

● Contract staff may be used subject to the qualifying conditions.

● Once a team entry has been accepted there will be no refund of the entry fee.

● All costs incurred are the responsibility of the teams.

● All competitors participate at their own risk and the organisers do not accept any responsibility for loss of personal or company property or injury, however caused.

● All entries must be signed by the data processing manager or equivalent authority.

"At British Telecom, our electronic mail service will demand round-the-clock reliability." TandemTM delivers it.

British Telecom installed a Tandem NonStopTM computer for the advanced trials of a potential electronic mail service.

Linked to the Public Switched Data Network, the electronic mail service will store messages in 'pigeon holes' until they are recovered at the recipient's computer terminal.

The highest levels of equipment reliability and data security are vital to the success of such an operation. Tandem NonStop computers were able to meet these exacting demands at a price that makes the electronic mail concept feasible.

Tandem's unique system of multiple processors renders the possibility of system breakdown or data loss virtually impossible — even in the event of a component failure.

Unlike other systems, normal maintenance and repair can be carried out while the computer is on line, without bringing the system down.

If, like British Telecom, your company is involved in high-volume on-line transaction processing, Tandem NonStop's unique capabilities could prove irresistible.

For more information, please contact us at our Northolt address.

Essential vocabulary is compressed into a small space

Dictionary of Data Processing (Second Edition). Jeff Maynard. Butterworth. £12.00.

IN the six years that have elapsed since the first edition of this book was published, DP has changed dramatically not in terms of volume but in structure and area. The basic processes remain the same, but equipment has become more efficient and generally smaller with the development of the silicon chip, particularly the Z80.

This has meant the spread of DP into new areas; at the simplest level into domestic appliances and traffic lights, and at the more complicated level into industry. More people are now forced to become involved in talking about computers, and are entering a new and strange world fraught with jargon.

An increase in the use of word processors and other electronic office equipment has also intro-

duced a new range of technical vocabulary, with which every office manager and secretary is going to have to become familiar sooner or later.

The author tries to cover words in every aspect of DP in only 200 pages, which means that explanations are necessarily short and sometimes may verge on the inadequate for readers with no experience of computers.

For example, a modem is described as "a device used to modulate and demodulate signals to be transmitted over communications facilities," with no clue as to its physical nature.

In addition to the lexicographical section, there are some very useful appendices, listing common acronyms and abbreviations - as essential in the computer industry as in the civil service.

It is sadly true though, that a dictionary is out of date the day

after it is written, and a few recent arrivals such as Unix and CPM operating systems and APL, are absent. VMB and VMK are also missing but old faithfuls DOS and George are in.

Tables of hexadecimal to decimal conversion make this a book to keep in the desk drawer for handy reference, as do EBCDIC tables, useful when interpreting punch cards without the aid of a card reader, and similar tables for paper tape.

Considering its size and price, this book is excellent value for money, and contains a wealth of information that we may all need to use every day in the future. What does EBCDIC stand for? "Extended Binary Coded Decimal Interchange Code," it says in the dictionary. Point proved?

Maggie McLening

This introduction is reader friendly

Illustrating Computers (without much jargon). Colin Day and Donald Alcock. Pan Books. £1.95.

IF books can be described as "reader friendly" in the same way that interactive computer systems are "user friendly", then this one fits the bill exactly.

Every aspect of computing mentioned is illustrated with a dia-

gram or cartoon, and the book is written in a chatty style.

The authors are to be congratulated on simplifying the explanation of what is inside a computer and how it works into a mere two chapters, much of which is devoted to the mysteries of binary. Silicon chips are also described in great detail, previewing a chapter dedicated to microcomputers and their uses.

The age-old question of whether computers put vast numbers of people out of work is raised, comparing this to the Luddite era, and the authors attempt to show it in the form of a cartoon (see above).

As an aid to easy enlightenment for those who know nothing about DP at all, this book is excellent.

M.M.

Aid to the intimidated first time user

The Director's Guide to Computing 1981. An Institute of Directors publication. £1.95.

I AM generally suspicious of guidebooks full of advertisements because all too often the advertising tends to colour the editorial content, so it was encouraging to read this apparently unbiased account of the fundamental approach the layman might adopt to understanding computers.

Do not be put off by this modest-looking publication, for between its flimsy covers is to be found a wealth of good minimal advice particularly useful for the first time user - that is both concise and free from computer jargon.

It is all too easy to fall into the trap of being intimidated by the prospect of getting a computer and consequently seeking the often expensive services of an "independent" consultant, but, as this guide does well to remind us, there

is frequently more to these so-called experts than meet the eye. As a basic introduction to this important management tool we could benefit considerably from this guide.

An interesting chapter by Day Eyskens (one of the dozen authors on the alternatives to in-house computing, particularly business, traces their development through to the future.

Perhaps one of the most pertinent comments in this guide comes from P. J. Thomas: "The computer business is based on complex and fast changing technology (which which it sometimes seems obsessed), talks a language of its own, and is still bad at communicating in business terms."

David Gordon, Deputy chairman of Greater Publications Ltd, London, which has just installed its first computer system.

Basic telecoms guide in official handbook

Telecoms Users' Handbook. M. B. Corby, E. J. Donohue and M. P. R. Hainer. Telecommunications Press, London. 370pp. £20.

WE have yet to see any material fulfilment of the opportunities promised by the passing of the British Telecommunications Act, but there is a lot of interest proffered in the area and almost as much ignorance displayed.

This handbook provides a plain language guide to the basics which could be useful to the manager finding his way around in telecommunications for the first time.

The book is firmly aimed at users, providing a range of information from lists of equipment and service suppliers to

breakdowns of various aspects of British Telecom's finances. Reference material such as the 18 pages of names and addresses of regional Post Office Advisory Committee officials alternates with passages on dealing with consumer problems and selecting consultants and training courses.

But the bulk of the book consists of introductory explanations, on tele message switches, on PABXs, on videodata and teletext. The most topical explanation is the summary of the government's liberalisation policy, the provisions of the British Telecommunications Act and the roles of the Office of Fair Trading and the Monopolies and Mergers Commission.

Donald Kennell

Helping librarians to choose

Minds, Micros and Terminals for Libraries and Information Services. Edited by Alan Gilchrist. Heyden. 121pp. £7.50.

DESPITE its rather dull and daunting appearance, this is an invaluable book for any librarian or information scientist contemplating automation.

The eleven papers are written by specialists with practical experience of their subjects, and they give helpful advice and informa-

tion. However, as the conference that the papers are taken from was given in 1980, some of the information may be out of date. There is a useful index and some of the papers give a list of references. A glossary of technical terms would have been welcome, if only to explain what "electronic minds" are.

Sue Kenley, Assistant Librarian, Swansea Central Library, Hens.

Cassani appointed to IBM boards

KASPAR CASSANI, IBM vice-president, has been elected to the boards of IBM UK Holdings and IBM UK, following the resignation of IBM's senior vice-president Jacques Maisonneuve from those boards.

The changes follow Maisonneuve's appointment to the company's corporate office and corporate management committee in December. Cassani succeeded him as chairman and chief executive officer of the IBM World Trade/Middle East/Africa Corporation and as president IBM Europe.

Cassani joined IBM Switzerland

in 1951, and after holding sales and staff positions there went to IBM Europe as director of operations for South-west Europe. He became director of marketing in 1967.

After a year as director of product line at IBM World Trade headquarters in the US, he became general manager, North-west Europe in 1971, based in Paris.

In 1976 he became administrateur-directeur-général, IBM Europe, and in 1980 was elected president of IBM World Trade Europe/Middle East/Africa Corporation.

Richard Hamper has joined Wordplex as national systems manager, responsible for software support. He was previously with Raytheon International Data Systems, where he was marketing services manager for two years, based in Sydney, Australia.

Jack Iddon has been appointed Midlands sales executive at Versatec. He previously spent four years with Texas Instruments, where he was Northern region sales manager in the digital systems division.

Alan Griffiths has been appointed product manager, communications products, at Computer Technology. He joined the company after two years as sales executive with Datapoint.

Mario Guzzetti, former international sales manager with Perkin-Elmer Data Systems, has become sales and marketing manager for Europe, the Middle East and Africa at Anadex. Immediately before joining Anadex he managed his own company, Wordata, which acted as a distributor for AM Jaquard Systems.

Robert Wright has been appointed sales manager for the North-east of England at Atlantic Computer Leasing. He was previously country sales manager with Leasco.

Mike Bardell-Smith has been appointed systems OEM manager at Data Recognition. He was formerly the company's software manager.

CONFERENCES

THE fourth annual symposium on the developments in electronic mail and messaging in Europe will be held on March 22-23 at the Cumberland Hotel, London. Organised by the Yankee Group, it aims to bring together speakers from Europe and North America to present an analysis of the range of services, systems, products and suppliers in electronic mail. Topics include text messaging systems, electronic voice messaging

systems, European market dynamics and teletex. Fee is £295 + VAT. Further information from Al Dunn, The Yankee Group, Regal House, Lower Road, Chorleywood, Herts. Tel: (44) 9278 4119.

A CONFERENCE and exhibition devoted to local networks and distributed office systems is being organised by Online and will be held at the London Tara Hotel from April 14-16. The conference

is structured in six half-day sessions and will deal with the selection and implementation of local network systems, including developments in Ethernet and the Cambridge Ring, and PARX. Online claims that the exhibition of local network products is the first of its kind. Registration fee is £385 + VAT. Details from Online Conferences, Argyle House, Northwood Hills, Middx. HA6 1TS. Top jobs at Systems Industries

TWO vice-presidents at Systems Industries have taken a step up the company ladder to become senior vice-presidents in their own fields.

Kent Winton becomes senior vice-president, marketing. He has been with the company since 1970, and vice-president, marketing since 1972. He will take responsibility for all Systems Industries' marketing activities worldwide.

Richard Milligan, who joined SI in 1973, has been promoted to senior vice-president, customer service. He was appointed vice-president, customer service in 1978. In his new role, he will be responsible for all manufacturing and domestic customer service operations.

Alison Newell, managing director of F-International, has been co-opted to the Council of the Computing Services Association. She will also chair the internal services committee of the CSA.

Head of R&D for Sinclair

SINCLAIR research's new R&D division, based in Southampton, will be headed by Michael Pye, who has been appointed head of communications development.

He joins the company from Honeywell Control Systems (UK), where he was director of engineering. Previous positions include director of electronics development at Gillette and technical and later managing director at Sinclair Radionics.

New director

FORMER BL International chairman Pratt Thompson has joined the board of the AID Group as a non-executive director. His former posts have included deputy managing director of the electrical components group Borthworne Holdings and vice-president of the US conglomerate AMP.

DATA ANALYSIS

... a method of analysing the operation of a business to allow the best computer system design.

A major reason for the development of costly and inflexible computer systems is the failure to describe the business, its data and how it operates. The Data Analysis methodology is a means of understanding what the business does independently of any consideration of the systems which may be used to computerise parts of it, and for analysing its data independently of the applications to which it may be put.

First published as a major series in Computer Weekly, Data Analysis was written by Rosemary Rock-Evans and based on a methodology developed by Ian Palmer. Now reprinted in book form and fully illustrated, it is available from Computer Weekly. Simply complete the coupon below.

ALSO AVAILABLE

BASIC FILE DESIGN

A brief and authoritative review of file design, covering sequential, indexed, sequential and direct techniques. This book is an aid to the busy DP professional who needs to improve the performance of files. It assumes and builds on elementary principles without becoming a full theoretical text. Reprinted from a Computer Weekly series written by Owen Hanson, senior lecturer in systems analysis, business systems analysis team, City University.

The Paperax 2000 paper shredder.

Shredder is portable

THE 2000 paper shredder is claimed by its manufacturer, Paperax, to be the first truly portable machine of its kind on the UK market. The machine fits neatly on to any desktop or working surface, allowing it to be used in any area within the office environment.

It weighs only 12kg, can be moved by any member of staff, and its portability enables it to be transported on the back seat of a car for meetings away from the office.

The shredder will cope with nearly all sizes of paper, up to and including computer printout of 14 1/2 in (370mm) and it will accept staples and paper clips on reports without difficulty, says Paperax.

Paperax Limited (CW), Unit 5, Southdown Industrial Estate, Harpenden, Herts. Tel: (05827) 66271.

Drum plotter for CAD/CAM users

ITS new wide drum plotter produces large scale, multi-colour drawings economically for computer-aided design and manufacturing users, says Calcomp.

The Model 1060 is designed to combine the space saving features of a drum plotter with the performance of large flatbeds. It has a 54in wide drum which provides a maximum drawing size of 4ft 6in x 120ft (the roll length). It is available with an optional 36in wide drum for maximum user flexibility.

The high performance 1060 has a drawing speed of 30ins per second, uses linear pen actuation for the fastest pen up/down times

available, and has an acceleration rate of 2G.

With four program selectable pens, the 1060 accepts four media types - translucent, rag, vellum and polyester film. Through operator controlled speed and acceleration, high plot quality is obtained with four different pen types.

Priced at about £26,000 (in single quantity), the plotter can operate in online, offline, and remote/time sharing environments.

Calcomp Ltd (CW), Cory House, The Ring, Bracknell, Berks RG12 1ER. Tel: Bracknell (0344) 50211.

IDS-80 raster station

THE GST-8250 raster graphic workstation from Gerber is now available on the company's IDS-80 CAD/CAM system.

Gerber claims that the workstation, which incorporates an independent HP1000E computer with 256 Kbytes of high performance memory, offers significant improvements in multi-workstation

performance over the more conventional systems. These distributed processing techniques are also claimed to permit fast screen update rates.

Gerber Systems Technology Inc (CW), Clive House, 12-18 Queens Road, Weybridge, Surrey KT13 9XD. Tel: (0932) 55951.

The Saitcon 800 colour VDU from Sait Electronics UK.

Colour display system

THE Saitcon 800 from Sait Electronics is a colour display system aimed at a wide range of process control applications where comprehensive dynamic monitoring is required by the operator.

Designed to be used with Sait's Midi, Maxi and Junio program-mable logic control systems, the system gives both general and detailed information, shows trends and analyses, statistical operating data, and so forth.

Applications include any industries where complex process control is undertaken, involving fluids handling operations, including the dairy industry, brewing and distilling, chemical engineering and similar handling operations.

The display is built up both statically and dynamically online, using the unit's microcomputer

controlled keyboard. Cursor positioning is controlled from the keyboard, as is the choice of function for characters, symbols, and choice of background and foreground colours to be used. Designed for ease of use, the cursor can also be moved by using a light pen.

Apart from the VDU and main keyboard, the system also has the facility for a double flexible disc unit for picture storage, and a subsidiary operator's keyboard for changing process control parameters while the system is running.

Two key locks are built into the system, giving a three-level security system.

Sait Electronics (UK) Ltd, Unit B, 13 Holder Road, Aldershot, Hants, GU12 4RL. Tel: 0252 331651/2.

Telephone typesetting

THE Typeshare package aims to provide real time typesetting over the telephone.

It was developed and is marketed by the company of the same name, which says it is the only system that will put the subscriber in full control of the end result and that can automatically provide a facsimile of the setting within six minutes.

The package includes an intelligent multi-functional terminal, a compact keyboard, and an "instant" computer-linked facsimile feature, says Typeshare.

Typeshare Ltd (CW), 42 Gloucester Crescent, London NW1 7DL. Tel: 01-532 8384.

THE CT 5000 is a free-standing combined punch and reader unit with electronic interfaces and controls allowing 5, 6 or 8 unit tapes to be read at switchable baud rates up to 2,400 baud, while 5, 6 or 8 unit tapes can be punched at switchable baud rates up to 300 baud. They allow simultaneous independent operation of punch and reader.

RGR Electronics Ltd (CW), Hillbrow Road, Liss, Hants GU33 7LE. Tel: Liss (075 960) 4125.

Remote devices seem local

DATATRAX has started deliveries of its Procon II protocol converter.

Conceived originally for use with hand-held terminals, it provides for auto answer and disconnection of modems, and error control, making remote terminals appear as local devices to host machines.

Procon II is a low-cost asynchronous device which can interface directly to any computer, capable of supporting teletype protocol, says Datatrax.

The unit includes internal fuse, disconnection devices for the protection of modems, and its firmware is designed to ensure line disconnection and prevent accidental or deliberate domination

of data input facilities. Facilities for Telxon one-way and two-way data communications are provided as input protocols. Teletype and 2741 are provided as output.

The unit is also available as a self-powered OEM "black box" comprising two UARTs, 1802 CPU, four Kbytes of ROM, four Kbytes of CMOS RAM with battery back-up.

Procon II is part of a modular system including tape and disc spooling stores, call logging printers and synchronous adaptors. Input protocols for competitive terminals will shortly be announced.

Datatrax Ltd (CW), Computer Centre, Gayton, Northampton NN7 3BU. Tel: (0604) 858011.

PRODUCTS - 2

Boss for small business

WITH hardware and software designed for a full range of small business applications, the Boss microcomputer is the latest addition to Olympia's office equipment range.

The range will also appeal to experienced, larger companies needing data processing facilities at the user point, says Olympia. There is the facility to communicate with mainframe computers and other computer systems, and the systems have been designed to be simple to understand and operate.

The microcomputers have 64K of RAM and choice of external storage capacity, and all use the Z80A processor chip. Three of the systems use twin, high density mini-floppy disc drives with a storage capacity ranging from 140 to 600 Kbytes per disc. The larger capacity 5 Mbyte system uses one mini-Winchester hard disc drive and one 600K mini-floppy disc.

Three printers are already available - 80 and 132 column dot matrix printers plus Olympia's Whisperdisc daisywheel for word

The Olympia Boss microcomputer is designed to be easy to operate.

processing. A full qwerty and Ascii upper and lower case keyboard, with a numeric pad is provided. There are 10 programmable function keys plus five cursor keys.

The display screen is a 12in CRT monitor, green on black which can be inverted by program. It provides the extra large capacity of 28 lines of 80 characters (2,240 characters total) which is virtually the size of a complete A4 page. High resolution graphics are also provided. The screen is flicker free and has a brightness control.

Software packages available include sales ledger and purchase ledger, stock control, invoicing and payroll and there are also word processing packages to improve typists' productivity.

Prices start at less than £3,000 for a 280 Kbyte computer with printer.

Olympia Business Machines & Co Ltd (CW), Market Department - Computer Systems, Olympia House, 199-205 Old Marylebone Road, London NW1 5QS. Telephone: 01-262 6788.

Shugart doubles storage capacity

TWO half-height, eight-inch floppy disc drives that are said to allow users to double existing storage capacity by placing two units in the space of one standard model, have been introduced by Shugart Associates.

The SA810 (single-sided) and SA860 (double-sided) drives, exactly half the height of standard eight-inch floppies, are fully compatible with Shugart's industry-standard SA801/851 series.

The new drives offer unformatted storage capacity of up to 1.6 Mbytes in the double-density SA860, track-to-track access time of three milliseconds - twice as

fast as standard eight-inch floppies - and average access time of 89 milliseconds.

Two new electrical functions, true ready and buffered seek, are offered on the SA810/860. Together they are claimed to eliminate the need for motor start, seek, and seek complete timers, allowing the system to operate at peak efficiency.

Priced at \$385 and \$450 respectively in quantities of 500 units, the SA810 and SA860 will be available in the first half of 1982.

Shugart Associates (CW), 475 Oakmead Parkway, Sunnyvale CA 94086. Tel: (408) 7330100.

Telex message entry system

A HIGH-SPEED OCR system for telex message entry that is claimed to be less than half the cost of other available systems has been developed by Mitsui Computers.

Called Telexreader, the system, which utilises Mitsui's latest desktop OCR machine, the TO-5000, and its CR-3000 message entry intelligent display terminal, costs about £10,000.

Messages for telex transmission are fed into the TO-5000, which scans at 300 chps, and from there they appear on the screen of the CR-3000 for editing and verification before transmission.

Mitsui Computers (CW), Oakcroft Road, Chessington, Surrey KT9 1SA. Tel: 01-397 5111.

The Lyme 6000 from Gresham Lion.

Eight-colour display

LATEST visual display terminal from Gresham Lion, the Lyme 6000, features a high resolution 14-inch colour screen providing an eight colour display. It is supported with a selection of software options, including alternate character sets, colour graphics packages and full compatibility with other terminals.

Gresham Lion (CW), Gresham House, Twickenham Road, Feltham, Middlesex. Tel: 01-894 5511.

We're telling your MD a thing or two about Local Networks.

Over the next few weeks decision makers in top companies all over the country will be hearing a lot about Datapoint. About our size, our reputation, our world-wide network. And about some of the things we're particularly good at - like installing Local Networks.

In a series of large space advertisements in all the quality daily and Sunday newspapers, we'll be revealing all to members of your Board of Directors and heads of your computer user departments. And we'll be suggesting that they ask you, their DTP Manager, to tell them more about us.

So make sure you've got all the latest information yourself. About our completely new 8600 processor, for example. And have you a copy of the new Datapoint brochure, seen the new Datapoint video tape, spoken to us personally lately? Just ring and ask us for the up-to-date picture. Before someone asks you.

Solid-state printing technique

A DESK-TOP printer claimed to be totally silent when on standby and almost inaudible when printing, is announced by Philips. It employs a new solid-state printing technique based on the momentary heating of tiny resistors, which means that the only moving part required is the platen that advances the heat-sensitive paper.

The Philips Copy 80 printer is a microcomputer-controlled line printer intended primarily as a high-speed hard-copy device for visual display terminals.

The machine may also be connected directly to a private telex exchange as a receive-only terminal, or via a modem to a telephone line for use in news rooms and elsewhere.

The machine's printing width of 80 characters per line and printing speed of 240 lines/minute mean that a 25-line screenful of information can be printed out in just over six seconds.

Philips Elektronikindustrier AB (CW), S-175 88 Järfälla, Sweden. Telephone: +46 758 10000. Telex: 115 055 PEAB S.

The Philips Copy 80 printer.

Versatile range of terminals

A RANGE of high performance matrix printer terminals from Peripheral Hardware comprises three machines: the series PH 1000, 2000 and 4000 from which eight different versions can be derived to meet a variety of applications.

The features will permit any of the machines to operate either as a hard copy printer (RO version) or as a printer-terminal with keyboard (KSR version), while for graphic representation a printer plotter is available.

The series 1000 and 2000 machines have printing speeds of 150 chps and 200 chps respectively but higher speeds of 165 chps up to 280 chps (with software or electronic switchable alternatives) are available on the series 4000.

A very high resolution of the matrix permits printing in correspondence quality at a speed of 85chps, switchable to 170chps. Proportionally spaced printing is also available as an option.

Peripheral Hardware Ltd (CW), Armfield Close, East Molesey, Surrey. Tel: 01-941 4806.

Memory up, cost down

NEW memory boards for Microfin Systems' portable data capture terminals significantly increase the memory size while substantially reducing the cost, says the company.

The maximum EPROM memory size has been increased from 32K to 32K and the maximum CMOS RAM memory size from 16K to 32K.

The new memory boards have enabled Microfin to reduce the overall cost of its portable data

capture systems by between 10% and 20%.

The larger memory size adds further flexibility to the Microfin portable data capture systems by increasing the range of applications. These now include applications where large information files need to be contained in the terminal before further data is collected.

Microfin Systems (CW), Winslade House, Egham Hill, Egham, Surrey, TW20 0AZ. Telephone: (0784) 37674.

In the battle to sell your system it's a real ally.

When you're campaigning to sell complete systems to the end user, you're not just selling your own expertise or reputation.

You've got allies in the people who make the component parts of your system. Like Ferranti.

Put in an Argus 700 computer and that part of your system is pre-sold. Because Argus creates confidence. Our Argus 700 Series is widely accepted and used in all kinds of systems. The chances are your customer wants his system to have an Argus.

So do you, when you come to think of it.

The Argus 700 is designed by systems people who know what's wanted.

Our Series 2 offers a great range and power spectrum. It's very flexible and very reliable. It doesn't waste money by giving superfluous power yet provides for growth when the time comes.

And it's British.

Call up Argus into the front line of your system selling.

Send for the Argus 700 Series 2 brochure.

Structured Programming

IBM – RPG AND COBOL SOFTWARE NORTHEAST – NORTHWEST EAST MIDLANDS, YORKSHIRE

Altergo Business Systems Limited has vacancies for Analyst/Programmers and MAAPICS Consultants to work on its expanding IBM System/23/34/38 business throughout the Midlands and North of England.

These are long term career positions which offer responsibility, good financial rewards and the opportunity to enhance your skills and experience. Applications cover the entire spectrum of financial, commercial, industrial and manufacturing activity.

We are particularly looking for people with enthusiasm, ambition, and above all, a professional outlook. We offer a dynamic organisation which recognises individual achievement. The rewards are a generous bonus scheme, excellent monthly salary reviews and excellent fringe benefits. All our staff are expected to be flexible both in outlook and geographically.

MAAPICS CONSULTANTS – £9-12K

Applicants should have a manufacturing or Accounting background with practical experience in the implementation of MAAPICS. Candidates must be well versed in the systems requirements of modern manufacturing companies. Some knowledge of programming and operating the System/34 or/38 is desirable but not essential.

ANALYST/PROGRAMMER – £7-10K

Applicants should have at least four years' experience in RPG along with a relevant background knowledge of IBM minicomputers. Experience of System/34 and/or System/38 is essential. A working knowledge of COBOL or BASIC would be advantageous.

If you feel that your potential can be realised through the challenge of working within an innovative and stimulating environment with secure prospects and career development, please ring Ruth Barga on 081-707 4399.

Licensed by the D.O.E. as an Employment Agency & Employment Business SE(B) 1480

ROLFE & NOLAN COMPUTER SERVICES LIMITED

- 2 computer centres in the City of London
- 7 Mb of core
- 2500 Mb of on-line storage

- On-line to 100+ clients in 8 countries
- International packet-switching network

Rolfe & Nolan Computer Services Ltd. are one of the U.K.'s fastest growing timesharing bureaux - acknowledged leaders in the field of providing d.p. services to Commodity Brokers, they are currently expanding into major new application areas utilising database-orientated systems on recently-acquired VAX hardware.

To help spearhead this expansion, they wish to appoint several experienced Analyst/Programmers to become involved in all aspects of the design, development and implementation of complex interactive systems, liaising heavily with the company's clients.

The company has much to offer - varied applications involvement, promotion and salary reviews strictly on merit and the opportunity to gain first-hand knowledge of the latest DEC hardware and software.

Senior Analyst/Programmers £10K - £12K

In addition to a high level of self-motivation, you should have:

- Sound academic qualifications
- At least 4 years' experience of DEC BASIC+ (or BASIC+2 and RMS)
- In-depth knowledge of either RSTS, RSX or VMS

For a strictly confidential discussion on these opportunities, contact Barry Latchford on the number below or on Newick (STD 082572) 3197 after 7.00 p.m. Alternatively, write to us advising consultants quoting ref. 297 and enclosing a brief career history.

Initial interviews will be conducted in London.

GOOD WITH PEOPLE?

TANGENT COMPUTER SERVICES are a USA and UK based computer software house. We are currently managing projects in the UK, the USA, Africa, the Middle East and the Caribbean.

To assist in staffing these projects we need to enhance our Resources Team.

Ideally, you will have experience of computing terminology and have a track record of dealing with people.

We are looking for a RESPONSIBLE individual with a MATURE ATTITUDE to their work - a person of ACTION and COMMITMENT with the capability of thinking clearly and responding to the challenge of fast moving international situations.

BUT OF PARAMOUNT IMPORTANCE IS AN OUTGOING AND LIVELY PERSONALITY with a willingness to learn and an ability to develop good personal relationships quickly - as this is essentially a 'PEOPLE' job.

It is a Company policy to promote from within where possible and, hence, a stimulating and rewarding career is available to the right candidate.

Please write, or telephone, in accordance to:

A. C. King
General Manager

ASTRONOMICAL
SATELLITE (IRAS)
The above satellite is due to be launched at the end of 1982. Experienced programmers are required to help prepare the software for handling the data for the Infrared Astronomical Satellite (IRAS). A background in astronomy would be an advantage. Programmers will be based at University College with Professor R. E. Jennings but will also be required to work in collaboration with the IRAS team at the Rutherford Appleton Laboratories at Chilton, Bedfordshire and possibly elsewhere. The appointment would be for approximately three years with starting salaries in the range £5,800 - £9,100 p.a. to £6,100 + £200 L.A. Application with a curriculum vitae should be sent to the Personnel Officer (Technical), UCL, University College London, Gower Street, London WC1E 6BT. (B437)

999 call... for a Police System Designer/Project Manager

up to £15,000 + car

We already hold a significant market lead in police information systems, and plan an increasing share of the computer-aided policing market - both at home and abroad - over the next few years.

As part of this programme, we now need to recruit a person with proven front-line design, development and implementation experience in Police National Computer Interface or message switching applications.

We have a number of very interesting commercial and technical developments in the pipeline, and the successful candidate who would enter our police project team at a senior level will be exceptionally well placed to make significant career progress with us.

Based at the Greenford headquarters of our Professional Services Division, the post carries a very attractive range of large-company benefits in addition to the starting salary of up to £15,000.

To find out more about the job, contact David Robinson on 01-578 9111. Alternatively write to him with full personal and career details at Data Logic Limited, 320 Ruislip Road East, Greenford, Middlesex.

Towards the total system.

SPECIALIST RECRUITMENT CONSULTANTS

NORTH BUCKS

SYSTEMS ANALYST

£9,000-£11,000

Our Client is a dynamic and highly successful medium sized engineering company which manufactures a high technology product and uses the most advanced computing techniques available, based on an IBM 4331.

A Systems Analyst is required to support the Project Leader of a COPICS system which is about to be implemented. Whilst COPICS experience is not essential, you should have at least three years' experience in an engineering or manufacturing environment and be capable of taking a system from specification to implementation.

You should be flexible in your approach to your work as the Company does not believe in rigid terms of reference but rewards initiative and enterprise. We expect you to be good at, and enjoy, user contact from shop floor to board level.

Job satisfaction is guaranteed, as you will be given total responsibility for a specific area and will be using pioneering technology. Working conditions are excellent, with modern offices and production unit set in this attractive part of the country. Your planned career progression will be detailed at interview.

For further information, please contact MARK IRENS, Advising Director, quoting reference CW0402/2.

SPECIALIST RECRUITMENT CONSULTANTS

LONDON N.W.10

PROJECT MANAGER TO £11,000

A division of a U.K. manufacturing/engineering organisation will shortly be installing a CMC REALITY mini computer with appropriate packaged software. This has created an opening for a Project Manager to take responsibility for identifying and implementing solutions to technical problems experienced in its implementation.

The following experience is required:

* Mini computer experience, ideally but certainly not necessarily on CMC REALITY.

* Manufacturing systems experience.

* The ability to understand complex user requirements and translate these into detailed D.P. implementation plans.

* Experience in controlling a small team of analysts and programmers.

This is seen as a ground floor opportunity for a person with the relevant background to gain his or her first experience of project management.

For further details, please contact MARK IRENS, Advising Director, quoting reference CW0402/3.

SPECIALIST RECRUITMENT CONSULTANTS

Bahrain

**Systems Analysts & Programmers - to c. £18,000 Tax Free
(single or family status)**

Bahrain: In recent years, the Gulf Region has sprung into prominence as being an area of significant industrial and financial growth. Within the Region, Bahrain has become a focal point of commerce attracting a number of the major multi-national companies and international banks. Bahrain is a politically stable and progressive state with strong traditional links with Britain. Social conditions are good and free from irksome restrictions. The Island has developed an excellent harmony between East and West and enjoys, for the greater part of the year, a pleasant maritime climate.

The Company: A successful and well-established industrial organisation which forms part of a large and diverse multi-national group. The Company has been using computers since the 1960's and is currently developing a number of sophisticated applications on its IBM 3031 and 4341 mainframes under OS/VS1. Extensive use is made of the TOTAL Database and ENVIRON i.p. monitor. As a result of the expansion of their d.p. activities, our client seeks to recruit for the following positions. Good career prospects exist within the Company together with the possibility to transfer within the group.

**Systems Analyst
c. £18,500**

Applicants must have good commercial systems experience, preferably in an IBM environment. The position will involve responsibility for the development of a number of financial systems.

Benefits:

- * Single or family status
- * Free furnished accommodation in modern bungalows
- * Five weeks' paid leave annually - paid return flight to the U.K.
- * Free primary schooling

For further details, please telephone or write to Andrew Cousins quoting ref 5731

**Analyst/Programmer
c. £15,500**

Applicants must have a good IBM COBOL experience and have had some exposure to systems design.

**Programmers
c. £14,000**

Applicants should have at least 2 years' IBM COBOL experience in an OS environment.

- * Considerable assistance towards secondary education for eligible children
- * Excellent recreational facilities
- * Free medical/dental attention for all employees

IBM people - Midlands

Our client finds that the new year has brought exciting new development work from their customers. The company is a leading Midlands systems house, specialising in the IBM marketplace. Their reputation for the quality of their staff is second to none. If you feel the demanding, professional, exciting world of a systems house would be of interest then these vacancies will suit you.

The projects undertaken are of a wide variety, covering most of the IBM range of equipment, including newly announced products. The same is true of the languages, teleprocessing and database techniques which are in use.

A few of the benefits are shown alongside, but the major factor must be the chance to really progress one's career in a positive way.

- ★ Salary reviews every six months
- ★ Pension, health and life insurance
- ★ Five weeks holiday, flexitime
- ★ Bonus, expenses and car allowance
- ★ Variety of development projects

**Programmers
£7,500 - £9,500**

We seek people who have IBM programming skills, using COBOL or PLI. Commercial use of these languages is required, on any IBM type equipment.

Additional skills in teleprocessing or database techniques such as CICS, DLI or IMS DC would be very valuable.

**Analyst/Programmers
£8,000 - £12,000**

The skills for these requirements are similar to the ones mentioned opposite. In addition, we will be looking for an element of program design and system design in your background. Experience of team or project management would also be of great interest.

Please contact Mike Hession - 021 236 2929 (24 hrs) to discuss these vacancies, Ref H47/01.

S.R. RECRUITMENT

14th Floor, Kennedy Tower, St Chads Queensway, Birmingham B4 6JA. Tel: 021-236 2929

South Coast Opportunities.

Zurich Life is part of the International multi-million pound Zurich Insurance group. Our continued expansion has led to more openings for high calibre men and women at our Portsmouth Head Office. This is an opportunity to get in on the ground floor of a major project to develop totally new systems for the Company, involving both on-line and batch applications.

We currently operate a four megabyte IBM 4341 under DOS/VSE using CICS and DL/1 and two megabyte IBM 370/158 under DOS/VSE using VOLLIE, CICS and DL/1.

Zurich's continuous training policy will make sure you will easily adapt to our standards and techniques and be prepared to meet the requirements for promotion as soon as the opportunity arises.

Zurich life

Systems Analysts Starting Salary c £9,600

Around 3 years' analysis experience in a commercial environment, preferably with a background in programming and some experience of DB/DC. Insurance experience an advantage.

Senior Programmers Starting Salary c £8,300

A minimum of 3 years' Cobol programming experience is essential, preferably with some experience of structured programming techniques and of CICS and/or DL/1. Job responsibilities will include preparation of program specifications and supervision of Programmers and Trainee Programmers within a project team.

Our Company offers a first-class working environment in a modern, prestige office, together with the following benefits:

- ★ An assisted mortgage scheme which can add a substantial sum to the salaries quoted. (At current mortgage interest rates a qualifying mortgage of £10,000 could add about £1,000

and a qualifying mortgage of £20,000 could add almost £2,000).

- ★ Generous relocation expenses, including, where appropriate, interest-free bridging finance to facilitate early settlement in the area.
- ★ Non-contributory pension scheme including free life assurance.
- ★ Non-contributory Permanent Health Insurance Scheme.
- ★ Subsidised Restaurant.
- ★ Flexible Working Hours.

If you feel that your skills and experience can contribute to both your own and our future, write giving personal and career details, marking your envelope for the attention of:

**C F Nash,
Personnel Manager,
Zurich Insurance,
Zurich House,
Stanhope Road,
PORTSMOUTH, PO1 1DU.**

Advanced Signal Processing

to £10,000

Central London & West Surrey

Logica

Logica's reputation for applied research continues to grow and our many prestigious clients include international companies, multi-national agencies and governments.

Our work involving advanced signal processing skills includes space and defence projects in:

- Image Processing
- Pattern Recognition
- Speech Recognition
- Parallel Processing

To keep pace with rapidly developing technology we also have a substantial in-house programme to provide development tools for the future.

At present we are particularly looking for people with up to 5 years experience to work on real-time microprocessor based systems, array processors, and vision systems.

If you are keen to develop your skills in a dynamic commercial environment this may be the logical step in your career.

Senior Sales and Marketing Executive

c. £25,000+Car

London based

Our client is a successful and profitable subsidiary of a well known U.S. manufacturer, with an established and substantial base of prestigious UK customers. Their Field Service Engineering Division has grown rapidly over the past 12 years and is now a major force in the third party maintenance market. With a £ multi-million turnover, a strong national branch network and an ability to guarantee two hour response time throughout the UK, they are well placed to take a substantially increased share of this new market, which is probably the fastest growing sector of the DP industry.

Their service covers a wide range of hardware, including mini and micro-based systems with their associated peripherals. The quality of their service is reflected by the fact that many leading UK distributors not only recommend them to their major accounts, but also involve them in critical pre-sales negotiations.

The company has a rare opportunity for a sales and marketing professional to handle negotiations with major accounts and distributors. A flair for closing orders is essential as they have an abundance of enquiries. Experience of large company sales/marketing and/or running one's own business would be advantageous. Applicants are welcome from any sector of the DP industry, and familiarity with Bureau or OEM environments is preferable.

The remuneration package is negotiable, and will include a basic salary with an initial guarantee and appropriate fringe benefits. Gross earnings as high as £40,000 are possible and the current five year business plan provides an excellent long term career path for a person with imagination.

For further information, please contact Peter Lloyd on 01-631 4184 or write to him at: A & A Consultants Limited, 10 Little Portland Street, London W1N 5DF.

**A & A

01-631 4184

Technical Projects Manager

£14,000 to £18,000

Candidates

Candidates will be required to demonstrate extensive previous experience in the development and control of real time computer systems based on large minis, e.g. VAX and Honeywell.

Candidates must have up-to-date experience in structured design and implementation techniques as well as experience in estimating, resourcing, project planning and control.

Their career to-date will show an above average rate of progress, variety of experience and previous positions of responsibility. It is unlikely that suitably qualified candidates will be below the age of 30.

The Position

The successful candidate will be responsible for one or more projects being undertaken on behalf of clients. This could require different responsibilities on different projects simultaneously. Self presentation in the form of written and oral communication is a normal and regular requirement of the job as is a professional manner with clients and staff. The opportunities for advancement are excellent. The position is based in Central London although some travel to client sites will be required.

The Company

Our client is a successful, profitable and expanding company with an international reputation for advanced computing and communications skills. They provide services and products in various countries around the world to major companies, professional bodies, and government organisations. For employees the company provides an excellent range of benefits including relocation assistance where appropriate. Prospects for advancement and long term career development are excellent.

Apply in confidence to Terry Harvey by sending personal and career details, or contact him for an application form, evenings 01-Missenden (02496) 4705

Sales Engineer Computer Graphics

CalComp is the world's leading manufacturer of computer graphics peripherals and systems, with an enviable record for innovation in this rapidly expanding sector of the computer market.

A vacancy now exists for a sales engineer to look after increasing sales activity in an area covering South Wales and South West England.

Preferably already living somewhere within this area, the successful applicant, male or female, will be responsible after initial product training for selling our full range of pen and electrostatic plotters, controllers, graphic COM systems, digitizers and graphics display terminals.

You will work mainly from home and we would expect you to have the following qualifications:-

- * proven experience and a good record in the sale of computer systems, peripherals or software.
- * a technical background and an understanding of scientific and engineering computer applications and, preferably, CAD.

This is an excellent opportunity to join the leader in the field and to manage your own territory. We offer a very attractive salary package, plus a company car, and other fringe benefits such as free BUPA membership.

If you are interested please write to our ring: Linda Barber, CalComp Ltd., Cury House, The Rhys, Bracknell, Berks. Tel: 0344 50211.

CALCOMP
INTERNATIONAL DIVISION

Network Development

The Rutherford Appleton Laboratory, part of the Science and Engineering Research Council, supports scientific researchers throughout the country. The Computing Division, which provides large scale computing services, and co-ordinates computing research, programmes, has posts available in network development areas. The Laboratory plays a major role in the development of the SERC X25-based network which covers most of the United Kingdom. It is also active in the field of high speed networks both to support numerous on-site applications and to support research in computer networking. A number of Cambridge Ring projects are under way, and other technologies are being investigated. It is planned to set up a central facility serving by very high speed bus giving access to the local computers at disc speeds. Computing facilities on-site include a large IBM complex, GEC, PRIME, PDP11, VAX, PDP10 and other computers.

Applicants should have a degree in a computer subject, computing experience and preferably some knowledge of computer networking.

Posts will be in the following grades:

Scientific Officer £5,170-£9,964
Higher Scientific Officer £5,530-£8,580
Research Associate £3,802-£8,580
(fixed 3 year term)

Some assistance with removal expenses may be allowed in appropriate cases. The Laboratory is a friendly community with its own restaurant and extensive sports facilities nearby. We offer excellent working conditions and benefits including a local transport service, generous holidays, sick leave allowance and a non-contributory superannuation scheme.

Contact Recruitment Office, Personnel Group, Rutherford Appleton Laboratory, Chilton, Didcot, OXON. OX11 0QX, or telephone 1A 610000 Ext. 5101 quoting ref. VN 014.

Closing date for applications: 4th March 1982.

Senior Software Engineer

We require a Senior Software Engineer probably educated to degree level and aged 30+ to take a key position in a new team that has the task of applying proprietary computers and advanced calculator technology to our standard range of testing machines.

The team is concerned not only with the development of standard products but also with customised computer systems for use by materials scientists in our worldwide marketplaces.

Experience of real time multitasking operating systems applied to instrumentation products is essential and experience of DEC RSX software is highly desirable. We are not just looking for a software engineer but an engineer who wants responsibility and involvement in making computer systems do useful things for materials scientists.

In keeping with the high standards we maintain, this Company is able to offer an excellent starting salary with four weeks' holidays p.a. and appropriate fringe benefits which include a non-contributory pension and life assurance scheme. A contribution will be made towards relocation expenses if appropriate.

For an application form please ring the Personnel Department or write to the Personnel Manager enclosing a detailed C.V.

Instron Limited, Corporation Road, High Wycombe, Bucks HP12 3SY. Telephone: High Wycombe (0494) 33333.

The Queen's Award for Technological Achievement: Major women may apply (1982)

INSTRON

Manager Data Systems

Racal-Mobilcal Limited, is a leading member of the Racal Electronics Group and specialises in the design and manufacture of sophisticated mobile communications equipment.

Geographically well placed in Reading, Berkshire, the Company is currently experiencing its most successful year and, in looking to advance still further technologically, seeks to recruit for its Engineering Department a DATA SYSTEMS MANAGER.

This position will carry the responsibility for all aspects of the Engineering Data Base Systems including PDS activities, P.C.B. layout, drawing reproduction

facilities and Company O & M services.

Applicants should be aged 35+ and be technically qualified to at least H.N.C. standard. At least 10 years' Drawing Office experience, including senior supervisory responsibilities is essential together with a knowledge of, and practical experience in, computer based documentation systems. Involvement in CAD/CAM techniques is highly desirable.

For this post—one which offers its own unique challenge—the Company provides a competitive remuneration package, over five weeks' annual holiday, pension and free life assurance scheme.

Assistance with re-location expenses will be given in appropriate cases.

Letters of application, stating age, qualifications, experience, and salary expectations should be addressed in confidence to:—
Mr. G. E. Fisher,
Personnel Manager,
Racal-Mobilcal Limited,
464 Basingstoke Road,
Reading, Berkshire.

RACAL

Senior Computer Engineer

London based c.£11,000 + car + relocation

Don't miss this opportunity to talk to United Computing, one of Europe's leading computer services bureaux. Because we offer all the opportunities associated with dynamic growth to a high calibre systems engineer, male or female. Our expansion, based on increasing ability to meet the increasingly specialist needs of our clients, means that we need your problem solving trouble-shooting expertise within the Technical Services Division of our Southern Regional operations.

Based on one of London's most modern and stimulating computer bureau environments, you'll be applying your skills to SIGMA and DEC 10 complexes, including IBM plug compatible peripherals. Specialist computer training is available if necessary, but you must be appropriately qualified (to ONC or equivalent level) with at least three years' maintenance or field engineering experience. Specifically, we require you to have knowledge of: maintenance of mini/mainframe CPU; fault finding; repair at chip level; maintenance of disc and tape drives and Assembler level programming.

Meet us at The Portland Hotel,
Piccadilly Gardens, Manchester
Wednesday, February 17th
Anytime between
11.00 a.m. and 7.00 p.m.
or Telephone London Office any day
01-253 1066 (reverse charges if you wish)

Whether you walk in to meet our Engineering Manager or talk to Helen Gardiner, our Personnel Director, over the phone, you will be able to discuss all the rewards and career prospects that only a major organisation can provide. But if neither alternative is possible, just write for an application form to United Computing, United House, 58/64 Leonard Street, London EC2A 4AN.

Integrated Circuit Design Automation

Texas Instruments is a dynamic international company working at the heart of the micro-electronics revolution and is constantly expanding its activities. One of our key growth areas is the automation of integrated circuit design and to support this activity we will shortly be commissioning an IBM 4341 installation which will be running MVS and TSO.

Against this background, we now need to recruit the following Systems/Software professionals for our Design Automation Department in Bedford.

Installation System Manager

To ensure the efficient use of the new machine and be responsible for user training and consultancy activities and the supervision of every aspect of its day-to-day operation. You should have experience of IBM operating systems, preferably including MVS and possibly gained in a technical research and development role. Good communications skills will be essential.

Senior Software Engineer

We are also looking for a Senior Software Engineer with experience of CAD-type programs (e.g. in support of integrated circuit design and development) to assume responsibility for one of our DA project areas. Design automation tools include logic and schematic simulators, compilers and layout geometric and schematic verification tools implemented in FORTRAN and PASCAL.

Both positions carry a competitive financial package, exceptional career progression opportunities and relocation expenses where appropriate.

Man or woman should contact Jena Sparrow for an application form on Bedford (0234) 223442 or write to the Personnel Department, Texas Instruments Limited, Menton Lane, Bedford MK41 7PA.

Cobol Programmer

Boost your career prospects in a high technology industry

The National Nuclear Corporation continues to make increasing use of computers and computing methods in all aspects of its business.

A large terminal network, based on DEC VAX 11/780 computers, is now operational and provides access to a number of large IBM, CDC and ICL mainframes.

A vacancy exists in our COBOL programming team based initially at Risley, but with relocation to Knutsford, Cheshire in 1983.

The successful candidate will have at least two years' COBOL experience on DEC or IBM equipment, be qualified to degree level and will not be less than 22 years old. Essential requirements will be self-motivation, ability to work with minimum supervision and be capable of completing projects to time scale.

The Company will offer a competitive salary to the right person. In approved cases, the Company will offer an attractive relocation package including agent and legal fees. There are the usual large company benefits including contributory pension and life assurance scheme plus contributory private medical insurance scheme.

Why not make the right move now? Write or telephone for an application form quoting reference No. RD28/CV to:

Mt K. A. Sykes,
National Nuclear Corporation Limited,
Warrington Road, Risley,
Warrington, Cheshire, WA3 6BZ.
Tel: Warrington (0925) 51291 ext. 404/288.

SYSTEMS ANALYST

High Technology Manufacturing Applications

N. LONDON

Up to £10,000

Are you happier dealing with tangible products rather than pieces of paper? If so, this opening will interest you.

Our clients are a go-ahead, innovative British organisation (part of a large Group) with factories in the UK and branches throughout the world. The products incorporate the latest developments in electronics, optics, lasers and precision mechanical engineering. Over 80% of production is exported.

A wide range of new projects is planned, and hardware is being upgraded to IBM 4341. To handle this spectrum of varied, interesting new developments, we seek a Systems Analyst who understands and is interested in production applications.

You should have upwards of two years' systems analysis experience in a manufacturing environment, or be able to demonstrate an awareness of manufacturing applications. A programming background, although useful, is not essential.

In addition to an attractive starting salary, our clients offer a comprehensive employment package, including Company pension scheme, annual bonus, season ticket loan and flexible hours.

Please ring us for a confidential discussion, write briefly, or leave a message on our answering machine after hours, quoting reference 711.

EDP SYSTEMS 01.637
52-53 Margaret St. London W1N 7FF 5796

UNIVERSITY OF NEWCASTLE UPON TYNE DEPARTMENT OF ELECTRICAL AND ELECTRONIC ENGINEERING RESEARCH ASSOCIATES VLSI Design Methodology

Applications are invited for four temporary Research Associates to assist in VLSI Design Methodology research. The research is funded by the SERC and jointly managed by the Electrical and Electronic Engineering Department and the Computing Laboratory. The grant includes the provision of a VAX 11/780 computer with advanced colour graphics terminals to work on second generation computer aided design tools for very complex integrated circuits.

The posts available include support for systems software and communications, circuit layout, simulation and verification of digital systems as well as data base and special purpose language research. Candidates should have a graduate qualification or equivalent in computer science or electrical engineering and have experience in the development of software using PASCAL or a similar high level language.

Two posts are available for 48 months and two posts for 42 months. Starting salary will be up to £3,800 per annum on the SERC scale £3,070-£10,576 per annum according to age qualifications and experience.

Applicants should send a curriculum vitae and the names and addresses of three referees to Professor D. J. Kinniburgh, Department of Electrical and Electronic Engineering, The Mura Laboratories, The University of Newcastle upon Tyne NE1 7RU, from which further particulars can be obtained. The closing date for receipt of applications is 15th February 1982.

CANADA

A major company in the petrochemical industry in Calgary is seeking experienced Programmers, Analysts and Computer Personnel of all levels.

Experience with IBM computers would be preferred but not essential.

Please send comprehensive resume to Angela S. Gibbons, ROBERT UNDERWOOD PARTNERS LTD., 11 High Street, Barnet, Herts.

(0441)

MICROSYSTEMS'82

IT WORKS!

At Microsystems '82, the formula was right – "excellent" and "very good" was how the quality of visitors and business enquiries were rated by the people who matter – the exhibitors.

Some of their comments:

"High quality of visitors and enquiries. Will certainly attend in 1982!"
Ohio Scientific (UK) Ltd.

"... a very successful exhibition!" Micro Scope Ltd.

"Successful introduction of latest low complexity colour display."
Microvitek Ltd./Bradford Council.

"Ninety-five quality enquiries." Seno Systems Ltd.

"The show was great – It surprised us the first time – It was even better in 1981. The quality of enquiries and visitors asking searching questions was excellent and, better still, they spent big money! Yes, it works!" Anadex Ltd.

MICROSYSTEMS'82
6,308

QUALITY VISITORS

The formula is right – the correct balance of USERS – SPECIFIERS – and the people who control their company's expenditure.

MICROSYSTEMS'82

Let it work for you!

February 24-26, 1982
West Centre Hotel

MICROSYSTEMS'82

Where product launches get maximum coverage!

Over 20 exhibitors launched new products or services at Microsystems '82, and these were seen not just by the 6,308 top quality business visitors to the show, but also generated huge interest amongst the press who attended.

Extensive PR coverage before the event ensured the attendance of over 80 journalists. Both UK and overseas publications were represented and among the media who visited were:

BBC Radio 4; BBC TV; Granada Technical Books; Electronic Engineering; Computable (Holland); The Sunday Times; OEM Design; The Economist; Personal Computer World; Electronic Engineering Times; Electronic Times; Process Engineering; Databus (Holland) and Microsystems (France).

OVERSEAS INTEREST!

As well as achieving considerable note from overseas publications, Microsystems '82 was visited by an impressive number of overseas business visitors from 37 countries:

- Australia, Austria, Belgium, Canada, Cyprus, Czechoslovakia, Denmark, Egypt, Eire, Finland, France, West Germany, Greece, Holland, Hong Kong, Hungary, Israel, Italy, Kenya, Lebanon, Malta, New Zealand, Norway, Sultanate of Oman, Pakistan, Philippines, Portugal, South Africa, Saudi Arabia, Spain, Sweden, Switzerland, Turkey, USA, Yemen, Yugoslavia.

At Microsystems – the overseas business potential comes to you!

– AND THE UK MARKET TOO!

The big UK-based users and buyers of equipment and services exhibited at Microsystems were there in force, all of them prospective clients – and from organisations such as:

- Ministry of Defence, EMI Electronics, IIT, DAF Trucks, Racal-Decca, Plessey, Ford Motor Co., Lloyds Registry of Shipping, ILEA, British Airways, Lloyds Bank, GEC Medical, Mobil Oil, Allied Carrels, Department of Energy, Arts Council, Unilever Research, Metropolitan Police, IBA, Gulf Air, British Steel Corporation, Alfred Dunhill, RAF, British Home Stores, Tesco, British Gas, Colgate Palmolive, BSC TV.

Software Support

W. M'sex £12,500 + car
C. London £14,000

Take this opportunity to join one of the most successful computer companies of our time. You will need several years technical software experience to include: real time, data communications and/or database systems. Analysts with banking or financial systems experience would also be of interest. You cannot fail to be impressed by this client.

PDP 11/34 Software

Hants £8.5K - £11.5K

If you would like to join a successful and substantial international company, offering a range of software opportunities with managers who care about your career, this is for you. Projects include real time industrial control systems, basic software R&D, computerised instrumentation, etc. You must know RSX11, CORAL and Macro-11. Attractive company benefits, generous relocation.

Programmer Analyst

C. London £7K to £10K

Our client is the Minc Computer Business Systems group within a large international financial organisation. An additional programmer/analyst is required to work on the development of packages for a range of equipment including PDP11, Wang 2200 and IBM 5120. Candidates must be degree level, COBOL/BASIC essential, DIBOL very useful. Attractive company benefits.

Systems Evaluation

W. Herts. £10K - 12K

Candidates are required for two new positions created within the development group of this expanding computer manufacturer. You will have a software background with reasonable knowledge of hardware. Your task will be the technical verification of complete systems for performance to design specifications. You will need the competence to derive and prove your own benchmarks.

Programme Manager

Surrey to £13K + car

Programme management is a staff function which operates across multi-discipline management lines to ensure the timely development and release of products within budget and marketing constraints. Candidates need to have a software and hardware background with development experience covering micros, W.P. comms. & O.S. They should be competent in planning and estimating with a firm but tactful manner.

Progs. to Team Leaders

W. Country £8K to £12K

This is an excellent ground floor opportunity for a range of good software people to join a new team being specially formed to develop an advanced micro based, office system product. Your background should be in systems software plus comms. and local area networks. You will work in an advanced block structured language. Reloc. where necessary.

Message Switch

London c. £9,500

An international bank with advanced message switch and communications systems based on DEC PDP 11/34 and 11/70 equipment. Is seeking an additional programmer to work in their communications group. Candidates will require RSX11/Macro-11 experience and preferably a knowledge of data communications. Superb working conditions. Attractive benefits: Low interest loans and mortgage, free restaurant, etc.

Project Manager

Berks. c. £12K + car

You will be responsible for the latest stage in the development of a multi-site message switching system. Computer centres in several major cities are already in operation. Candidates will liaise with sales, development, vendors and official agencies in negotiating product implementation and installation. Some pre and post sales support is involved. Telecommunications experience is essential.

Networking Software

Beds/Herts. £10K-13K+

You will be an experienced data comms. person, probably with a background in bisync, protocols. In more recent times you will have been involved in X25 projects and be up-to-date on recent developments in networking. Tasks vary from: internal consultancy to team leader responsibility for design and implementation. Positions are with expanding engineering development groups.

Pre-Sales Support

Berks. c. £13K + car

We would like to meet candidates with several years software experience who are interested in joining the special systems group of an international computer manufacturing company. Your tasks will be evaluating operational requirements and technical analysis of non-standard product content in system proposals. You will be part of a small team working closely with sales.

Apply in confidence to Terry Horvey by sending personal and career details, or contact him for an application form, evenings Gt. Missenden (02406) 4705 or daytime as below.

SALESMEN FOR COMPUTERS IN TELECOMMUNICATIONS

(London and Home Counties)

BTS is a privately owned company specialising in the hire and sale of computer controlled equipment used in the management and control of telephone costs.

The majority of our systems incorporate the DEC PDP11 range of computers, together with software developed by our own team of design engineers.

Two professional people are needed to sell our services, often at director level. Typical system prices are between £10K and £20K and it is essential therefore that you have a successful career record in the high capital value office system field. It would be helpful if you have had some experience of the telecommunications market, but this is not an essential need.

Base salary will be negotiable from £8K with company car provided. On-target commission will provide a minimum £4K extra, with no ceiling on higher earnings.

Applications to Peter Kelly, Business Telecommunications Services Ltd, Sealdon House, 212-220 Addington Road, Sealdon, Surrey CR2 6LD; or telephone 01-867 8886.

Cynon Valley Borough Council
Cyngor Swyddfastraf Cwm Cynon

Department of Director of Finance Appointment of Computer Programmer/Analyst (Grade A.P. 4/5)

Applications are invited from persons with computer programming experience in the operation of I.C.T. systems and systems, and with a sound knowledge of the C.P.A. for appointment to the post of Computer Programmer/Analyst (Grade A.P. 4/5) in the Department of Finance.

The Council operates an I.C.T. system on a DEC PDP 11 computer, supporting two I.C.T. systems, and operating at present on a DEC PDP 11 computer. It is intended to transfer to the Council's DEC PDP 11 computer and the successful applicant will be required to carry out the duties of the post.

The Council operates an I.C.T. system on a DEC PDP 11 computer, supporting two I.C.T. systems, and operating at present on a DEC PDP 11 computer. It is intended to transfer to the Council's DEC PDP 11 computer and the successful applicant will be required to carry out the duties of the post.

Sales & Marketing Recruiters Ltd
A Sales & Marketing Services Company

SALESMEN

Exchange your job for a career

What are you helping companies to make the most of their future productivity, do you ever think about the productivity of your own future?

A job is simply a task performed for a reward. A career might best be described as a vehicle for enabling the individual to exploit his strengths, overcome his weaknesses and grow towards his maximum potential. Unfortunately, most sales people are in the former category. If your job runs out of challenge, please remember that our consultants have more direct experience of computer sales and management than any other recruitment agency in the industry for professional competence and high ethical standards and an extensive portfolio of employment opportunities to suit most individual needs.

UNIVERSITY OF LONDON MANAGEMENT SYSTEMS DIVISION

Increased System Development has brought about the need for additional staff.

Two Experienced Programmers

Are required to join the Management Systems Division which provides a University wide administrative computing service based on two ICL 2986 computers running under DMS2 and George 2S. Applications are intrinsically commercial but are wider than in many DP Departments.

The vacancies will be filled initially on a two year fixed contract basis and ideally applicants will have 2-3 years' experience of ICL COBOL in a on line environment.

Salaries, according to age and experience, in a range to £8,000 per annum. Further particulars and application forms available from Personnel Department, University of London, Senate House, Malet Street, London WC1E 7HU or telephone 01-836 8000 (Ext. 16). Closing date for applications is 18 February 1982.

FIELD ENGINEERS OPPORTUNITY KNOCKS 82 CAREER ADVANCEMENT + ££££

Don't allow your career to mark time this year. Opportunity knocks this year if you know where to look.

Major Systems, Micro, Mainframes, Data Comm, Mainframes, third party services.

Exciting applications - our clients, market leaders with tremendous growth rates, can offer very high basic salary, generous bonuses, excellent benefits, and a stimulating environment. Also, perhaps more important, it is a fast moving, genuine training and career development with exposure to technical support, supervisory and management openings.

Immediate opportunities exist in London, Home Counties and other areas. Act now, ring us (ask for Chris) to discuss your future.

SALES BIT Find the people who influence the decisions

In my recent article on the difference between the "actual" and the "assumed" decision hierarchy, I pointed out that the person at the top of the company pyramid is an essential contact when any major sale is being made but not necessarily the one who will make the final decision.

There is another idiosyncratic element of the decision-making process that can also be overlooked: the unofficial company organisation that exists within the official one. In many companies and institutions, there can be an interaction between individuals and/or groups of people that is more powerful than the official "family tree".

The larger the organisation, the more likely this is. It can be a subtle trap for the unwary salesman who does not realise that the organisation chart the managing director was so happy to give him is more of a camouflage than a selling aid.

The salespeople most affected by these hidden forces are those involved in products which, by their very nature (usually high capital value), imply a substantial period between initial contact and the final decision.

Without doubt, the best way to penetrate the hidden organisation is from beneath. In some cases, middle management may know who calls the tune; in others the answer may best be found on the shop floor.

One of the most common forms of hidden influence on the decision-making process is the introspective pressure group, whose primary interest lies not with what is best for the company at large, but for its own limited sphere of influence.

For example, a company is deciding upon a computer both to process accounts and handle production. Probably the computer that was initially installed some years ago was for accounting purposes only, and consequently was controlled by the chief accountant, as were subsequent machines that also catered for production needs.

The production department feels like a poor relation and believes that its requirements are always given bottom priority when, in reality, they should have top. So this time they are determined it will be different. They have had a long time to think about it.

What will they do? There is little chance of them taking over control of the existing computer operation; so their only real alternative is to secure independent processing facilities. They create practical justification and fully utilise all lines of political influence to rally support for their cause.

Good timing is essential so they are most likely to play their cards towards the end of the selling cycle.

Meanwhile, back at the top of the company pyramid, the salesman believes he is competing with a couple of other mainframe manufacturers for a centralised distributed processing system whereas, in reality, he is also unknowingly competing with a number of

S'WARE MGR

HERTS

To £12K

Imagine having technical and line management responsibility for the commercial wing of this manufacturer's systems house. Consider employing your commercial s'ware and transaction processing expertise in this satisfying role. Realise it now by immediate action. Occasional trips to Europe. (GT 2548)
